VET in Europe - Country Report

2011
This country report is part of a series of reports on vocational education and training produced for each EU Member State plus Norway and Iceland by members of ReferNet, a network established by Cedefop (European Centre for the Development of Vocational Training).

The opinions expressed in this report are not necessarily those of Cedefop.

Please note that ReferNet reports are based on a common template and are intended for use in an online database available at:

Therefore, the reader may encounter repetitions in content.

The preparation of this report has been co-financed by the European Community.
Title: France. VET in Europe - Country Report 2011

Author: ReferNet France

Abstract:

This is an overview of the VET system in France. Information is presented according to the following themes:

1. General context - framework for the knowledge society
2. Policy development - objectives, frameworks, mechanisms, priorities
3. VET in times of crisis
4. Legislative and Institutional framework - provision of learning opportunities
5. Initial vocational education and training
6. Continuing vocational education and training for adults
7. Training VET teachers and trainers
8. Matching VET provision with labour market needs
9. Guidance and counselling for learning, career and employment
10. Financing - investment in human resources
11. National VET statistics - allocation of programmes

This overview has been prepared in 2010 and its reference year is 2009. Similar overviews of previous years can be viewed at:

More detailed thematic information on the VET systems of the EU can also be found at:

Keywords:

vocational education and training (VET) systems; initial vocational training; continuing vocational training; lifelong learning; VET policy development; financial crisis and VET policies; VET legislative and institutional frameworks; validation of non-formal and informal education; teachers and trainers; anticipation of skill needs; vocational guidance and counselling; VET financing mechanisms; allocation of national VET programmes; national and international qualification systems.

Geographic term:

France

1. **GENERAL CONTEXT - FRAMEWORK FOR THE KNOWLEDGE SOCIETY**

1.1 **Political And Socio-Economic Context**

The institutions that make up the Republic of France (Fifth Republic) are governed by the Constitution of 4 October 1958, later completed by the 1963 Referendum, which instituted the election of the President of the Republic by universal suffrage. The President of the Republic is elected for a five-year term. The government is directed by the Prime Minister, who determines and steers the nation's affairs. He is held to answer for his actions before the National Assembly. Within the government, the Minister in charge of Education is responsible for initial vocational training; the Minister in charge of Labour, meanwhile, has powers where continuous vocational training is concerned.

The national territory is divided in departments (99) and in regions (22 mainland regions and 4 overseas regions). The departments have been created since the French Revolution (1789) and the regions in 1959, but have got a real administrative power since 1982. A new department has been created in 2011: Mayotte.

Regions can consist geographically of 2 to 7 departments except for overseas regions which have only one department. On the other hand, departments and regions are managed by councils whose members are elected by direct suffrage and are consequently independent from one another.

The French nation is a unitary nation. However since the adoption of Decentralisation Laws, (the last one: the 13 august 2004 law on liberties and local responsibilities), some of the State's duties have gradually been transferred to the departments and regions.

Regarding Education, the centralised State has kept responsibility over the content of the instruction and the examinations, and over the employees, while the Departments and Regions have been given powers regarding how the schooling establishments are equipped and run.

As relates to vocational training, it is now the regional councils which are in charge of apprenticeship and vocational training for unemployed youths and adults.

Along with the Regions, the State jointly funds certain plans intended for the unemployed people and the employees.

As relates to socio-economic particularity, there’s a strong high unemployment rate. (2.6 millions au sens du BIT). The result of the crisis is a steep decline in the French economy.

In 2009, 25.7 million people are employed and 2.6 millions are unemployed in the sense of the BIT.

### 1.2 Population And Demographics

Mainland France (excluding the 4 overseas regions (DOM): Martinique, Guadeloupe, Réunion and French Guiana, the two territorial collectivities: Mayotte and Saint Pierre and Miquelon, and the overseas Community. (COM) French Polynesia, Wallis and Futuna Islands and Austral and Antarctic territories) covers 543.9 thousands square kilometres.

On January 2010, the total population of France amounted to 64.72 million. There’s a slow increase for several years.

In Spite of the economic crisis, the born number increased in France in 2010.

In 2009, the fertility rate remains at a high level (1.99 child for one woman). The life expectancy for women is 84.5 years, this rate is one of the highest rate on average in Europe. The life expectancy for men is 77.8 years, this rate corresponds to the European average. In France, the natural balance of births is very different from the other European countries. Without France, the natural balance of Europe in 2010 would be divided by two.

If recent population trends remain, metropolitan France will account for 73.6 million people at January 1st, 2060. The number of people aged 60 years and more will rise by more than 10 millions.

**OLDER WORKERS**

Improving the employment rate of older workers is for France a central concern. National Government and social partners have worked together to reach this aim.

Since the law of social security funding (2009), a penalty of 1% is imposed on the payroll of companies with 50 employees and more, if they did not conclude an agreement or a plan of action in favor of older employees.

The duration of agreements or action plans should not exceed three years and will address at least three areas of action:
- Recruitment of older employees in the company,
- Anticipation of changing careers,
- Improvement working conditions and prevention of situations of hardship,
- Development of skills and qualifications and access to training,
- Planning for career and transition between work and retirement,
- Transmission of knowledge and skills development and tutoring.
The Law of 24 November 2009 on vocational guidance and training also provides features aimed directly at senior employees:
- Creation of second-party career interview (after 45 years old), to allow the employee to anticipate the second part of his professional life
- Implementation of financial incentives when the tutors are senior citizens, for example through training alternating contracts.
(see § 3.2.3 National Action Plan for Employment)

In 2008, in the commercial sector, the majority of employers believe that older employees are an asset to the collective work (experience, knowledge, corporate memory and complementarity between teams). The increase of the share of employees aged 50 and over in the coming years, raises fewer concerns than in 2001. The expressed reservations mainly relate to salary costs and to a lesser extent to productivity.

In 2009 in France, 56.9% of persons aged 50 to 64 are active, employed or unemployed. The support given to early retirement during the period 2004 to 2008, has been shifted in 2009 to support the participation rates of 50-64 years in employment.

*Source : DARES, Analyses, EMPLOI ET CHÔMAGE DES 50-64 ANS EN 2009, JUIN 2010 • N° 039 - Commentaire DARES*

According to the table 2, on January 1st, 2060, the old-age dependency ratio will increase from 25.81 in 2010 to 45.2 in 2060.

This development will lead to important needs in human services.

IMMIGRATION

Since 18th century, France is a country with a long-standing history of immigration.

Between 1990 and 2003, the number of immigrants has increased (19%). After several years of residency, a substantial number of immigrants have been able to acquire French nationality. In 2005, this was the case with 2 millions people, that is to say 40% of immigrants.

In 2009, 5 millions immigrants (people of foreign descent, born abroad) were residing in mainland France, accounting for 8% of the population. This percentage has remained stable since 1975.

3.1 million people aged 18 to 50 years old, born in France are children of immigrants. Half of them are under 30 years old. 

Source : Insee Résultats N° 122 Société - juin 2011
Trois aspects du portrait de la population : Démographie, Immigration, Éducation.
Enquête Trajectoires et Origines, 2008 (INED et INSEE)

The state finances training related to the hosting of foreign workers (civic education, French language courses, etc.).

The Ofii (Office Français de l'Immigration et de l'Intégration - The French Office of the immigration and the integration) is a public body. It is in charge of the welcoming of the foreigner people who "hold, for the first time, a french residence permit and for those who intend to stay in France on the long term, to accompany them in a process of integration in the French society during the first five years of their residence in France."

Created by the law of March 25th, 2009, the OFII has replaced the national Agency for immigration and welcoming foreigner people (Agence nationale de l'accueil des étrangers et des migrations - ANAEM) as well as part of the actions led by the Agency for the social cohesion and the equality of opportunity (l'Agence pour la cohésion sociale et l'égalité des chances ACSE). Ofii provides a part of the linguistic training.

The 2010 State budget law has officialised the transfer of the management and the financing of the first welcoming and the accompaniment of the political asylum seekers to the Ofii.

1.3 Economy And Labour Market Indicators

In 2010, the French economy is again expanding. The GDP increased by 1,5 %, (2,7 % in 2009). Nevertheless, this recovery is moderated: at the end of 2010. The level of activity remains lower than before the recession. Concerning the demand, the recovery can be explained by the strong rebound of the exports, driven by global trade.

In addition, consumer spending accelerated, even if the growth rate remains lower than before the crisis, because the purchasing power is less dynamic and the unemployment rate is important. The demand of the public administrations is decelerating sharply in 2010, after having accelerated in 2009 as a result of the recovery plan.
The evolution of the demand of the companies explains the scale of the economic cycle in 2009-2010. After having strongly contracted in 2009, their investment progresses slightly in 2010 because of expenditures on capital equipment and services. Driven by the strong recovery in demand, imports have rebounded significantly in 2010.

ECONOMIC COMPOSITION BY SECTORS

We notice a strong development for 30 years in France of the jobs in service sector. Indeed, in 1980, 65% of French employees operated in this sector. In 2011, it amounts to 76%. These global evolutions are in line with a context characterized by major economic changes and development of service sector in French economy and the growth of working age population.

In the industrial sector, qualified jobs increased but it is not compensated the strong decline in jobs requiring a lower level of qualification. But the agriculture sector has suffered most from the development of skills, while building trades and public works were maintained and recorded a significant increase in the level of qualification.

Qualification standards required for job, in particular for employees with employee status, have also increased. However, an exponential increase in part-time work, temporary and fixed-term employment is noticed in the tertiary sector.

Source: DARES (Analyse, SEPTEMBRE 2011 • N° 066 - L’évolution des métiers en France depuis 25 ans)

The proportion of employed people in the businesses and other services sector and non marketed services in France is higher than the average of UE and has constantly increased during the last ten years while employment in the agricultural and manufacturing sectors has declined. (Cf table 3)

EMPLOYMENT RATE

The employment rate for people aged from 15 to 64 years decreased between 2008 and 2009. About one person out of ten people employed was working in the same company for less than a year. Young people, especially with few qualifications, are most concerned by unemployment.

UNEMPLOYMENT RATES

The unemployment rate in France increased by 2.1 percentage points since the beginning of the global crisis. This increase is lower than that observed on average in OECD countries between December 2007 and May 2010 (2.8 percentage points). However, France was already in a relatively unfavorable situation in comparison with the other countries, and today, 9.9% of the workforce is unemployed (1.3% higher unemployment than the OECD average).

Source: Employment Outlook, OECD 2010: Confronting the crisis in employment, Employment Outlook 2010 - The situation in France
The unemployment rate of young people under 25 years has increased from 17.4 in 2003 to 22.5 in 2010, it remains higher than the EU average rate (20.8 in 2010).

### Expenditure on Education and Training

From 1990 to 1993, the share of education and training expenditure in GDP rose markedly to 7.8 %, because of the efforts made by the regional authorities and of the re-evaluation of teachers’ salaries.

Nevertheless, since 2002, the share of total public expenditure on education, at secondary level of education (ISCED 2-4), has been lightly decline, from 2.86 % in 2002 to 2.55 in 2008.

### Table 6: Total public expenditure on education as % of GDP, at secondary level of education (ISCED 2-4), 2002-2008

### 1.4 Educational Attainment Of Population

In 2002, early school leavers represented 13.4% of the population aged 18-24. This proportion has declined continuously between 2002 and 2008 (from 13.4% down to 11.8% in 2008). For 2009, this percentage has decreased (12.3%). In the same time, there’s always the same number of young people who leave school without qualification (around 150 000 per year).

Source of data Eurostat (LFS); extracted: 19-05-2011; last update 01-04-2011

Concerning the young population with at most lower secondary education, the French proportion is lower than that of the European average.

Nevertheless, concerning the evolution of access rate at the level of high school diploma, an important progress has been made during the last years. The evolution of the access rate at this level is characterized by three phases. A slow progression between the 50s and the mid eighties (from 10 % to 35 %). A stronger increase since 1984, due to the creation of vocational high school diploma (baccalauréat professionnel), but also due to the increasing number of students in final year of general high school. Since 1994, the rate of annual access is around 63 %.

In the autumn 2009, the difference between boys and girls access rate is about 10 points, (70,0 % for girls and 59,1 % for boys). This difference is more significant for general series (11,2 points) than for vocational series (2,2 points).

Source: Repères et références statistiques sur les enseignements, la formation et la recherche- édition RERS 2010

As said before, we can notice that the number of women graduated is higher than that of men, for the general high school level.

The rate of lifelong learning-Adult participation in education and training of women remains higher than that of men.
1.5 Definitions

GENERAL EDUCATION = ENSSEIGNEMENT GENERAL: body of knowledge and competencies which are essential to master to achieve success with his schooling, to his training, build their personal and professional future and succeed in life.

PRE-VOCATIONAL EDUCATION – N/A

VOCATIONAL EDUCATION = ÉDUCATION (ENSEIGNEMENT) PROFESSIONNELLE: training aims to acquire knowledge or a title that provides access to a profession.

TECHNICAL EDUCATION = ÉDUCATION (ENSEIGNEMENT) TECHNIQUE OU TECHNOLOGIQUE: even if this term is sometimes associated to vocational education, it is quite different. Technical or technological education is based on the acquisition of the processes and the methods based on the scientific knowledge.

TERTIARY EDUCATION; SYNONYM (OR PART) OF HIGHER EDUCATION = ENSSEIGNEMENT SUPÉRIEUR: education provided by universities, graduate schools and other institutions awarding university degrees or other higher education qualifications.

FURTHER EDUCATION - N/A

POST-SECONDARY NON-TERTIARY EDUCATION = ENSSEIGNEMENT POST SECONDAIRE NON SUPÉRIEUR: it is not possible to access the higher education without a high school diploma. There is only one exception: the, Diplôme d’Accès aux Études Universitaires (DAEU diploma to access to universities) which gives the same rights as the high school diploma, in particular in terms of access to the higher education.

TRAINING = FORMATION: process of acquiring practical knowledge, skills, attitudes.

INITIAL VOCATIONAL EDUCATION AND TRAINING = FORMATION INITIALE: the training first obtained after a course of study. It is opposed to continuing vocational education and training.

CONTINUING VOCATIONAL EDUCATION AND TRAINING = FORMATION PROFESSIONNELLE CONTINUE (OR FORMATION CONTINUE): the continuing training is the area of training for those who have left initial education and training

SCHOOL-BASED PROGRAMMES = PROGRAMME SCOLAIRE: detailed written description of training content planned for school.

ALTERNANCE TRAINING = ALTERNANCE: a dual training system where the beneficiary follows in an alternating way theoretical studies in a training provider and practical learnings in a company.
**APPRENTICESHIP**: there’s two meanings: a general one’s for which “apprentissage” means “learning” as an acquisition of new knowledge or know-how and a specific one’s for a French measure where “l’apprentissage” covers a form of alternance training with a work contract (see below chap 4).

**CURRICULUM = PROGRAMME**: detailed written description of training content planned.

**QUALIFICATION = CERTIFICATION**: all the diplomas and titles provided by schools, universities and others training providers.

**SKILLS = COMPÉTENCES AND SAVOIR-FAIRE**: equivalent between a training, an experience (capability to do something) and an professionnal activity.

**COMPETENCES = COMPÉTENCES**: Knowledge system that provides the capability to meet the demands of an activity.
2. Policy Development - Objectives, Frameworks, Mechanisms, Priorities

2.1 Objectives and Priorities of the National Policy Development Areas of VET

2.1.1 National LLL Strategy

Lifelong learning is a national obligation.

It includes initial training, including apprenticeship, and subsequent training, which are continuing vocational training for adults and young people already engaged in active life. In addition, any person engaged in the workforce has the right to validate the non-formal and informal learning including professional competences and voluntary activities.

The policy against illiteracy and for learning the French language is part of lifelong learning.

The law of November, 24th 2009 concerning the lifelong guidance and training, in eight titles and 62 articles, marks a new stage of reform of the French system of continuing vocational training.

It introduces several changes.

At first, the “portability” of the individual right to training (portabilité du Droit Individuel à la Formation - DIF), is the ability to use this right after the end of the work contract, during an unemployment period or the new job. The DIF can be financed by the OPCA (Organismes paritaires collecteurs agréés - Approved Joint Collecting Bodies) (see §10.4). It gives the employee the choice to use this training rights, when he wants. This DIF is now linked to the person and not only depending on the employer decision.

It brings also new changes to the training plan. The training plan includes now two categories of training courses instead of three:

- The courses concerning the adaptation of the employee in his function, and the evolution or the preservation of employment in the company
- The courses concerning development of his skills

It develops the "vocational stage assessment" (le Bilan d’étape professionnel), the "second-party career interview" (l’entretien de seconde partie de carrière) or the "guidance and training passport" (le passeport orientation formation).

Since the law of 2009, the vocational stage assessment has a legal existence. Its purposes, from a diagnosis carried out jointly by the employee and his employer, are to allow employees to assess their abilities and professional skills. It is a right for any employee with at least two years of seniority in the same company, on his request. It allows also the employer to define the training objectives of the employee. Modalities of implementation and financing will be specified by ANI (Accord national interprofessionnel - National Interprofessional Agreement).
The second-party career interview concerns employees in the year following their forty-fifth anniversary in companies with at least 50 employees. It is different from annual appraisal, and from skill audit, and aims to prevent discriminatory practices related to age in career development. It allows the employee to anticipate the second part of his professional life.

The *guidance and training passport* contains informations about guidance, training followed by the employee and competences. The guidance and training passport training was created by the social partners in 2003. It is already set up in several professional sectors.

Besides, the law of 2009:

- addresses the needs of career security by establishing a joint fund dedicated to training for job seekers and low skilled employees, the *Fonds paritaire de sécurisation des parcours professionnels* (Joint Fund for professional career security – FPSPP, see § 10-4);
- replaces the “Plan regional de developpement de la formation professionnelle” (PRDF) by the *Contracts of the regional plan for the training development* (CPRDF) - see § 4.5;
- provokes the reduction of the number of Approved joint collecting bodies (Opca) by assigning them new conditions to exist - see § 10-4.

### 2.1.2 Policy development in the main VET policy areas

#### Governance and Funding

The main change concerning gouvernance and funding in 2009 is the creation of the Joint Fund for professional career security (*Fonds paritaire de sécurisation des parcours professionnels* – FPSPP), see § 10-4).

The FPSPP has resources equal to a percentage of the mandatory funding contributions of employers. This rate amounts to 13% these contributions for 2011.

With more than 1 billion euros in 2010, the fund is intended to support the work study contracts in 2011, to finance the development of training, to acquire basic skills and supporting training programs for employees weakened given the economic crisis (redundants, part time work).

*Source : Budget Plan for 2011 – Ministry of Employment*

#### Guidance and counselling

The Ministry for education is responsible for initial guidance and counselling and other Ministries for the profesional or “continuing” guidance such as the Ministry of employment, the Ministry. of agriculture or the Ministry. of industry. Nevertheless there is a specific body which tries to have a global action: the Interministerial Delegate for Guidance.

There are a lot of bodies for Guidance and counselling, which correspond to specific audiences, students, schoolchildren, students, youth aged 16 to 25, job seekers. These organizations are available at all the local levels.

Since 2009 and for the very first time, training and guidance are associated in a global vision: LL Learning & Guidance (LLL&G).
One of the objectives of the law of 24 November 2009 concerning the LLL&G, is to define the content of the mission of public service of information and guidance. This law is developing guidance tools, such the "vocational stage assessment", the "second-party career interview" or the "guidance and training passport" - see § 2.1.1.

**TEACHER AND TRAINER TRAINING**

The training of teachers aims to give teachers the skills required for a constant adaptation to changes in the educational system and for the success of all students.

Training is impacted by technological progress. This impact was reflected in the training programmes, training techniques but also teachers’ and trainers’ competences. They must implement these programmes and teach differently in new environments such as Digital Work spaces. In order to prove that teachers have mastered the technological progress, the C2i (certificat informatique et internet - IT and Internet Certificate) was introduced to certify that they have the skills to teach in the context of new information technologies and communication.

There are two levels.

First level concerns students and trainees in continual training. This level has to be acquired before the bachelor degree.

The Second level includes expectations about professional guidance and provided training. It has to be acquired before the Master 2. Currently, five C2i (certificat informatique et internet - IT and Internet Certificate) level 2 are developed:

- C2i-2 teacher
- C2i2 professions of law
- C2i 2 health professions
- C2i 2 engineering professions
- C2i 2 environment jobs and sustainable development

*Source: http://www.c2i.education.fr/*

Assisting new teachers is a priority.

**CURRICULUM REFORM AND INNOVATIVE APPROACHES TO TEACHING AND ASSESSMENT**

Innovative approaches are increasingly being used in vocational training for adults. They help to overcome a deadlock, to take the distance to see a situation differently and provide a solution.

The innovation in the context of open and distance learning brings all stakeholders to develop new skills, reviewing their traditional activities. The transmission of knowledge becomes vertical cross. The trainer is becoming a coach, a facilitator or a tutor.
**SKILLS NEEDS STRATEGY**

Various measures are implemented in consultation with the public employment service, combining Pôle emploi, l’Association pour la formation professionnelle des adultes (AFPA-Association for Adult Vocational Training), and, at the territorial level, local authorities (regions, departments), business groups, the employment, the poles of competitiveness and the social partners.

Various devices are implemented by the State to anticipate skill needs: e.g. contracts Prospective Studies (*Contrats d’études prospectives-CEP*), which allow the state and the social partners to jointly establish a diagnosis on the state of a sector and possible actions. The cost is shared between the different partners. (see § 8.1)

In terms of regions, Regional observatories for job and training (*Observatoires régionaux emploi-formation - OREF*) assemble various services in a region: regional council, departments, services of the National Institute of Statistics and Economic Studies (*l’Institut national de la statistique et des études économiques*), Office of the Ministry of 'Education, sometimes chambers and partners. Their role is to collect data on employment and training for a prospective analysis of trades and qualifications in each region.

The work carried out at the sectoral level is especially the result of joint sector observatories. Some ministries have also set up observatories: public service, health and social work.

The National Agreement of 5 December 2003 on employee access to vocational LLL, modified by a national agreement of 5 October 2009, provides that each branch has to set up a prospective observatory for occupations and qualifications (*observatoire prospectif des métiers et des qualifications - OPMQ*). These observatories are intended to provide prospective monitoring on the evolution of occupations at national, regional, European and international level if possible to anticipate their transformation, the emergence of new jobs, or even their disappearance.

The results of the studies of the quantitative and qualitative evolution of jobs, realized by the National Joint employment Commission (*The Commissions paritaires nationales de l’emploi –CPNE*) are given to the employers, the employees, the representative institutions of the staff, the competent bodies of the professional sector, the Opca, to facilitate their mission assisting the counselling and the accompaniment of the individual projects.

Locally, the Director of Pôle Emploi – National Employment Agency - may decide to target certain areas of activity, given the characteristics of territories. Sectors covered include the sectors where job demand is insufficient. In this case, aids for training are possible.

**VALIDATION OF NON-FORMAL AND INFORMAL LEARNING**

The Validation of non-formal and informal learning (*VAE – validation des acquis de l’expérience*) can lead in whole or in part, to a diploma, a title or certificate of professional qualification entered in the National Directory of professional certifications (*RNCP – répertoire national des certifications professionnelles*).

In most cases, the candidate must complete a file detailing his/her professional experience and skills. Then, he/she presents his application before a jury who decides to validate all or part of the degree sought. In case of partial validation of the achievements, requirements are proposed to the candidate to get the full diploma.
In higher education, validation existed before the introduction of VAE (validation des acquis de l'expérience - the Validation of non-formal and informal learning). Even today, anyone can validate his professional and personal experience to get an education without having the required entry qualifications. The law of social modernization of 17 January 2002, which established the VAE, allowed universities and other higher education institutions to award degrees by other ways than the training or learning.

In 2009, 32 000 cases were declared admissible and filed by candidates for graduation from vocational or technological education by VAE (validation des acquis de l'expérience - the Validation of non-formal and informal learning). has been considered by a jury, 10% more than in 2008. (see § 6.3)

Source: Budget Plan for 2011 – Ministry of Employment

2.1.3 CURRENT DEBATES

The VET fundings

Social partners, national government, and other stakeholders, noticed a strong deficit in qualification with a large number of persons without any qualification or having a low level of qualification. These persons were the first victims of the crisis.

They want to give a new possibility to offer training to the people without or with a lower qualification. They propose to create a new fund which can give funding for workers as well as unemployed people, to follow training.

To reach this aim, they created at first time (beginning of 2009), an emergency fund (see chapter 3). Then, the law of 24 November 2009 created the FPSPP (Fonds paritaire de sécurisation des parcours professionnels - Joint Fund for professional career security), see § 10.4.

Moreover, the law of 24 November 2009 concerning the LL Learning & Guidance, has an impact on the organization of OPCA (Organismes paritaires collecteurs agréés - Approved Joint Collecting Bodies). Indeed, the number of Opca has been gradually reduced – see § 10.4.

The reform concerning the OPCA (Organismes paritaires collecteurs agréés - Approved Joint Collecting Bodies) consists in grouping them together and better ensure the management of funds for vocational training.

The 1st September is the deadline to request application for approval for 2012. These requests are sent to the DGEFP (Délégation générale à l’emploi et à la formation professionnelle - General Delegation for employment and vocational training) who examines their validity. The current authorization expires on December 31st, 2011.

Mergers and consolidations have been planned to reach a threshold of collecting 100 million euros per year, the minimum threshold imposed on the collection of funds to obtain accreditation. Previously, this threshold was at 15 million euros per year.

There are 65 OPCA (Organismes paritaires collecteurs agréés - Approved Joint Collecting Bodies) and there should be approximately 20 next year.

Source: Decree of 22 September 2010 – Décret du 22 septembre 2011
A right to guidance

In addition, the law 2009 established a right to guidance. This right enables each person to be accompanied in its guidance. A public service for guidance is implemented following the pattern of public service employment. It is therefore necessary to coordinate actions and policies for guidance. Thus, a DIO (Délégué à l’information et à l’orientation – delegate for information and guidance) has been appointed. Its mission is to define, articulate and coordinate policies and actions in the field of guidance. He also sets priorities and evaluate the national policy of guidance and information concerning educational and vocational training.

A dematerialized services is setting up, in order to give people access to information and facilitate the exercise of their right to guidance defined by the law. Discussions focused on the issue of governance of this dematerialized services (web portal internet and phone plateforme). This dematerialized services for first level of guidance, is financed by convention State/Regions/ FPSPP (Fonds paritaire de sécurisation des parcours professionnels - Joint Fund for professional career security). (see § 9)

Finally, the law establishes labeling guidance facilities. Thus the state and regions are facing the issue of labeling structures Reception, Information and Guidance (Accueil, Information et Orientation, AIO). These goals are aiming at the quality of reception, information and guidance of the public, and are part of a broader policy of quality assurance system. The issue of quality is based on the national labeling organizations likely to participate in the mission of public service of guidance for youth and adult, criteria and procedures for labeling are defined.

The label entitled "Orientation for all - Pole information and guidance on training and jobs," (« Orientation pour tous - Pôle information et orientation sur les formations et les métiers ») is an admission to participate in the mission of public service of guidance It is granted to structures on request.

Source: Article L. 6111-5 of the Labour Code

Seniors inclusion

On the other hand, the law emphasizes on supporting the senior in connection with the maturing process of the population and the lengthening of working period. And a reflection is conducted on the senior and actions are undertaken to enable the transmission of the particular knowledge of senior citizens in business by developing mentoring schemes, development of more appropriate training. The challenge is to maintain and develop skills to enable older people to ensure their employability, to stay in their jobs or to change jobs.

In 2008, 36% of businesses with more than 20 employees, with employees aged 50 and over reported that the population pyramid was part of their management tools (25% in 2001). Even if they have the obligation to negotiate every three years since 2005, quarter of the establishments belonging to a company or a group of more than 300 employees had discussed or concluded a management agreement of jobs and skills GPEC (Gestion prévisionelle des emplois et des compétences - strategic workforce planning ) at the end of 2008.

Sources: DARES Analyses SEPTEMBRE 2010 • N° 054

Since May 16th, 2011, employers can apply for a financial assistance from the state for hiring a job seeker aged forty-five years and more in a professionalization contract. The amount of this assistance is 2000 euros.
The assistance is managed by National Body for Employment (Pôle Emploi), who will sign an agreement with the State.  

Work study contract

The number of early school leavers without any qualifications has decreased continually during thirty-five years (1975, 25% of students of the same generation left school at college or at CAP (Certificat d'Aptitudes professionnelles - Professional Skills Certificate)-or previously at BEP (Brevet d'Etudes Professionnelles - Professional Studies Certificate) and 6% today). The general rise in study and in educational attainment has increased the qualification standards required. This enlarges the risk of professional exclusion. Each year, 140,000 young learners leave the school without any diploma and 90,000 leave higher education without validating qualification.

The aim for the State is to develop work study contracts and apprenticeship contracts. Various measures have been decided. It was set up an "alternative work study plan" in 2011 bearing in mind to reach 800,000 young people in work study training (with 600,000 apprentices) in 2015 and one million after. It is also to simplify the existing systems and to upgrade the work study training.

Two laws changes provisions for work study training. In order to encourage companies to recruit young people into apprenticeship contract or professionalization contracts and in order to expand the use of these contracts for other sectors (temporary, private employers, seasonal activities) and to simplify rules.

Source : Law n 2011-893 of 28th July 2011- Law related to the development of work study contract and career security (JO du 29.7.11)
Source : Law n°2011-900 of 29th July 2011 related to de amended finances pour 2011, article 23 (JO du 30.7.11)

These laws have raised debates. Several measures are provided and in particular, an increase, from 3% to 4%, for the mandatory quota of employees in work study training in companies with more than 250 employees, an increase the age required for work study contracts. It also provides for other measures.

An assistance is planned for recruiting a young in apprenticeship and professionalization contracts in small and medium enterprises, or jobseekers aged forty-five years and more under professionalization contract

Source: Decrees No. 2011-523 and 2011-524 of 16 May 2011

The reform of the trainer status

The purpose of the reform concerning the teacher, is to recruit them directly after a general or vocational master without specific training before teaching. The theoretical training was reduced. In return, the salary of young trainers was increased by 10%.

A current debate is about the status of teachers in public sector, in particular their obligations regarding their schedules is in current debates. Since 1950, a decree specifies that the mission of the qualified teacher is to provide 15 hours weekly and 18 hours if he has not the requested qualifications. For teachers in primary education, however, the status is set by the Education Code.

In 2011-2012, another current debate concerns the paper book. On an experimental basis, it will be replaced by a digital application, as it is the case in college since the new year start 2010. From elementary school to the end of compulsory school, all the students' progress is recorded by teachers through staff skills booklet (livret personnel de compétences – LPC). This booklet is also a tool for dialogue with the family.

2.2 The Latest Developments In The Field Of European Tools

In France qualifications are traditionally used as the key criterion for access to work and study. The labour market is mainly regulated by collective agreements where workers qualification requirements are set. Qualification is defined through several descriptors including the qualification levels required to be considered as qualified to be recruited and paid a wage, thus as a licence to practise.

The identification of valid qualifications is done by CNCP (Commission nationale des certifications professionnelles - National Commission for Vocational Qualifications) in 2002. A National Qualifications Framework (NQF) was introduced to make qualifications more transparent in the labour market. The framework, has five levels, and contains a grid showing pathways to employment through qualifications in the various economic or labour market sectors. There are numerous systems of qualification in France. The State, the social partners, institutions with responsibility for quality assurance, even a range of public and private organisations may be designated as legitimate awarding authorities. However, the value of qualifications differs according to circumstances, and according to their usefulness to users in the labour market.

The creation of a RNCP (répertoire national des certifications professionnelles - National Directory of professional certifications or VET qualifications catalogue) created an official inventory of all the qualifications delivered in France corresponding to this definition. To be included, the qualification must establish certification processes that cover formal, non-formal or informal learning, and a specific procedure named VAE (validation des acquis de l'expérience - The Validation of non-formal and informal learning) for the recognition of non-formal and informal learning recognition.

Changing international perspectives on qualifications

The European influence is integrated in the creation of the CNCP (Commission nationale des certifications professionnelles - National Commission for Vocational Qualifications). The main objectives of the CNCP are linked closely to the transparency approach developed through European collaboration and the French qualification landscape with its different subsystems reflects this. When the RNCP (répertoire national des certifications professionnelles - National Directory of professional certifications) was created in 2003 it was derived from the Europass certificate supplement format. A permanent national workshop has operated since 2004, through which representatives of the CNCP tripartite membership are following implementation and designing a new French framework referenced to EQF (The European qualifications framework).

There is a strong international influence specifically linked to the development of the licence to practise processes used to regulate activities such as sea, air, rail, etc, as well as engineering, energy and some other occupations.
Such convergent qualifications are generally named habilitations: their scope is limited to specific competences or fields of activity, so they are not considered as qualifications that can be registered in the CNCP (Commission nationale des certifications professionnelles – National Commission for Vocational Qualifications) or be referenced to EQF.

Qualifications trends in France

The key trend in the French context of changing qualifications is the evolution of the ways in which qualifications are designed and used. Qualifications can now be seen more as reference points or milestones for life that provide social signals based increasingly on representing competence. Qualifications used to be a single, final milestone defining for life an individual’s achievement in education and training. This is no longer the case, and it seems that the individual needs to acquire further qualifications, often not in traditional ways, to demonstrate his or her currency in the mobile and changing situations of working life. The other side of this evolution is that the design of qualification has had to become more legible as a signal. Qualifications developers have to explain more clearly how learning inputs are transmitted, and how they are validated with reference to competences or outcomes. This is important for development in several related fields of activity: guidance, training, recruitment and other aspects of human resource management.

Source: Extrait du CEDEFOP Changing qualifications, A review of qualifications policies and practices 30 janvier, 2011

A methodological frame, ECVET-European Credit System for Vocational Education and Training, is conceived for the professional education and training, to describe certifications in terms of "units".

Concerning the implementation, the French National Association for Automobile Training (Association Nationale de Formation Automobile – ANFA), the Chamber of Commerce in Paris and the French Ministry of National Education form a support team, working together for the benefit of the ECVET system.

For recognition of non-French diplomas, France has been created the French network of information on academic and professional recognition of qualifications centers (ENIC-NARIC - Centre national d’informations sur la reconnaissance académique et professionnelle des diplômes) which:

- establishes the guidelines of comparability of certificates for a diploma(s) obtained(s) abroad;
- informs foreign people on how to pursue a regulated profession in France;
- provides information on the procedure of recognition of French diplomas abroad.

Since 1 September 2009, the ENIC-NARIC network has been issuing, when studying a case permits, certificates of comparability to a degree obtained abroad.

French agency for european training programmes

France has set up a national agency for the implementation of the Education training throughout lifelong program and use all the whole european programmes. provided. Agence Europe-Education-Formation France - LLL programme French agency.

The Europass system enables an increase in the adequacy of individual qualifications through Europe to facilitate geographic mobility - but also professional mobility.
Currently, the Europass portfolio consists in five documents:

- The Europass CV: in 2010, 138 were completed online from the CEDEFOP website.
- The language passport in 2010: 6,457 have been completed online from the CEDEFOP website.
- Diploma Supplement. in 2010: 9,911 were issued by the Agency Europe Education Training France.
- The Certificate Supplement,

Source: Agence Europe-Education-Formation France - French agency LLL program.

The guidance and training passport modified by the law of November 24th, 2009 will be harmonized with the European model of EUROPASS.

The first evaluation of the Europass initiative gave the following results: the Europass initiative achieved its objective as a tool promoting the mobility of citizens; it meets citizens’ needs in making their skills and qualifications more easily understandable and acceptable both in a context of learning on the job market.

2.3 Internationalisation (1) and transnational mobility in VET (2)

2.3.1. POLICY FRAMEWORK FOR INTERNATIONALIZATION AND TRANSNATIONAL MOBILITY IN VET

Erasmus

European mobility under the Erasmus program has increased from 25,942 in 2007/2008 to 30,213 in 2009/2010.

The number of signed charters with institutions from foreign countries is still rising.

The three first host countries for Erasmus students from France are Spain, the United Kingdom and Germany. Mobility in the Scandinavian countries is still rising. Mobility of placements is growing rapidly.

Source: Agence Europe-Education-Formation France - LLL programme French agency.

---

(1) Internationalization of education is understood as the process of integrating an international, intercultural and/or global dimension into the goals, functions (teaching/learning, research, services) and delivery of education (adapted from Internationalization of Higher Education: New Directions, New Challenges, IAU 2005 Survey).

(2) Transnational mobility in VET is understood as any period that a worker, jobseeker, VET student, teacher or trainer spends abroad in an education or training institution, a company or any other organisation for learning or teaching purposes. Comment: knowledge, skills and competences acquired during the period spent abroad may be validated and lead to certification (Cedefop definition).
**Leonardo**

The Leonardo da Vinci programme enables the recipient to receive a lump-sum of residence which contributes to the cost of language and cultural preparation and management fees.

Source: Budget Plan for 2011 – Ministry of Employment

In 2010, mobility projects were funded in France and concern Europe countries thanks to Leonardo programme:

- 3,038 young people in initial vocational training in the school have received training (from 2 weeks to 6 months) (2,754 in 2009)
- 3,882 French trainees left to take a work placement (from 2 weeks to 6 months) in another EU country (2,473 in 2009)
- 1,503 people on the labor market went on a course (from 2 weeks to 9 months) (1,317 in 2009)
- 629 vocational education and training have received practical training exchange between professionals (1-6 weeks) (636 in 2009)

Source: Agence Europe-Education-Formation France - LLL programme French agency

**Grundtvig**

Grundtvig program aims to improve the quality and the European dimension of the education of the adults due to diverse activities of cooperation at the European level to offer to the European citizens more possibilities of training throughout their life. It concerns projects of individual mobility for staff of the education and the training for adults (trainers, educator, presenter) and projects of educational partnership Grundtvig. In 2010, it represents 3 286 000 euros.

**Erasmus mundus**

Erasmus Mundus is a program that aims to improve the quality of European higher education and to strengthen intercultural understanding. The program promotes and supports the mobility of people and cooperation between European and non European institutions. The program budget is 950 million euros for 2009-2013.

Source: Agence Europe-Education-Formation France - LLL programme French agency

**Geographic mobility of students and young graduates**

In 2007-2008, 3.3 million students are being trained outside their country of origin, 2.7 million in OECD countries. The number of these students has increased fourfold within the last thirty years and countries of destination are becoming more diverse. France is the third host country of destination for these students, as well as Germany.

Just over 62,000 French students follow studies abroad, they choose mainly a neighboring country.

Source: Information Notice No. 11/11 MESR July 2011
The International Internship Programme (Volontariat International en Entreprises - VIE)

The VIE is provided by the law and allows French companies to entrust a young person up to 28 years old, to follow a mission abroad for a flexible period of 6 to 24 months.

The person follows its assignment abroad in a French company. The candidate can find his own assignment, by a request to companies or consulting offers.

Source: www.civiweb.com

The managing structure is UBIFRANCE, the French agency for international business development. They examines the application of allocation and manages the VIE.

On January 28th, 2011, 6545 people VIE were working in 1,632 companies. (30,347 since 2001)

The International Volunteer Administration (Le Volontariat International en Administration - VIA)

The VIA is designed for youth from 18 to 28 years old, who want to work for state services abroad. The person can be placed under the authority of the Ministry of Foreign and European Affairs (about one thousand volunteers each year) or the Ministry of Economy, Industry and Employment (over 200).

The Information Center for International Volunteering (CIVI) is the organization that promotes international volunteering, under the supervision of MAE, the DGTPE and UBIFRANCE.

3. VET IN TIMES OF CRISIS

3.1 Overview

MAIN ECONOMIC SECTORS AFFECTED BY THE CRISIS

In 2009, the labor market registered the largest employment reductions observed since the early 1950s: 248,000 jobs were suppressed, mostly in the first half of the year. The half of the jobs suppressed during the crisis were recovered in late 2010. At the end of 2009, the situation improved. In 2010, the number of employments in labor market increased by 125,000. This deterioration of the labor market has affected the evolution of wages, but this effect was offset in 2009 by the low inflation. After a virtually stable in 2008, the average salary increased by 1.2% (in constant euros) in 2009 and 2010.

Source: Dares Analyses Août 2011 • N° 065 - EMPLOI, CHÔMAGE, POPULATION ACTIVE : bilan de l’année 2010

It can be seen that the crisis is having a strong impact on employment which is unequally affected depending on the type of contract, sector of activity or geographical area.

Thus, the number of job vacancies collected by the Employment Centre 'Pôle Emploi' fell by 20% between October 2008 and September 2009. This decrease is particularly marked for open-ended employment contracts which make up 31% of the offers and whose number has fallen by 27%. Fixed-term contracts (for less than and more than a month) have fallen respectively by 17% and 16%.

Source: 'Les secteurs inégaux face à la crise' (Non-uniform effect of the crisis) by the studies, appraisals and international affairs departments of Pôle emploi, March 2010.

The regions are affected to varying degrees by the crisis, in particular attributable to their specialisation (industrial or tertiary).

The North-East regions (Franche-Comté, Lorraine, Picardie, Champagne-Ardenne, Bourgogne) are those that have lost the most jobs due to the crisis: a loss of over 5% between the beginning of 2008 and the end of 2009, compared with 3.6% nationally. The industrial regions remain the most exposed.

Conversely, the Southern regions (Languedoc-Roussillon, Midi-Pyrénées, Provence- Alpes - Côte d'Azur and Aquitaine) have least suffered from the crisis (2% to 3% job losses). Their specialisation in the tertiary sector has a protective effect.

*Source: Insee, employment estimates.*

Mainly created in the non-agricultural sector, jobs have been mainly relied on the dynamism of temporary work sector (which had lost nearly 230,000 jobs at the height of the crisis) since mid-2009. In 2010, nearly 100,000 jobs in the temporary work sector were found. However, it doesn’t compensate for the job loss.

Without the increase of temporary jobs, industry sector has reached a level of job losses close as before the crisis, a decline of about 60,000 positions in 2010, (171,000 in 2009).

In 2010, the number of entries in the non-agricultural business sector increased by 17,000 jobs, while a stagnation of work study contracts (2000 posts) is observed.

*Source: Dares Analysis August 2011 • No. 065
Employment, unemployment, labor force: The Year 2010*

GROUPS HIT MOST

The sections of the population most affected by and most exposed to unemployment are men, young people and temporary workers.

Young people and men were most affected.

The youth unemployment rate has increased more than that of the overall population. This rate was 2.3 times higher than the total unemployment rate in 2007; this proportion reached 2.5 in 2009.

Eldery people were in a paradoxical situation: the unemployment rate increased more and more, as well as their employment rate.

Temporary workers have suffered the effects of the crisis much more than permanent workers. The number of temporary workers fell between the first quarter of 2008 and the first quarter of 2009 (294,000 fewer jobs). Then, in 2009, it stabilized and then rised again.

Afterwards, the stable jobs were affected.

The forms of employment more flexible were the cause of the restart of the job in 2010.
Regarding the economic activity, the employment decline appears less than what one could have predicted.

Source: Series of updated statistics published by the ILO for the Ministers of Labour and Employment of the G20 Member Countries.

3.2 Effects of the crisis on VET and corresponding measures

3.2.1 Trends in learners’ behaviour

We have no figures that measure the effects of the crisis on learners' behaviour in respect of training, following the measures implemented by the public authorities and business sector. We present a survey illustrating the relationship the French have with training during an economic crisis. The findings however cannot be used to extrapolate a general rule.

According to a survey carried out in June 2009, the French (82%) believe that in-service training does not protect them from the crisis. **80% of them state that they are unable to do a training course leading to a diploma and 70% to undertake a competencies review.** In 2009, one French employee in three undertook training (three days maximum in 67% of cases). For 38% of French employees, in-service training allows people to take a new direction towards more profitable activities or to learn to manage the effects of the crisis. Although the idea of carrying out several professions during one's career is now well-entrenched, 75% of the French consider that career reorientation is still a difficult issue to bring up within companies.

3.2.2. Trends in enterprises’ behaviour

Some companies use vocational training during periods of under-activity. Since the public authorities have developed financial incentives to help maintain continued employment and cushion the effects of the crisis, mechanisms have been set up as well as practical assistance for companies. Some have taken advantage of these to train their employees on short-time working to help them to maintain and/or improve their qualifications. These employees are paid an allowance, e.g. through the use of the individual training right benefit (DIF). (Please see § 6.1.2)

The economic crisis has weakened small businesses. Two thirds of small and very small businesses questioned in a survey believe that vocational training is a relevant tool for assisting employees during a period of economic crisis. This response is especially positive for companies with over 50 employees (nearly 80%) and in the services sector (70%). For 41% of companies in difficulty, short-time working and staff cuts are the main measures used or that will be used.
Organisations with over 200 employees have a fuller approach to the crisis: most have implemented / or would be interested in setting up strategic workforce planning (GPEC Gestion prévisionnelle des emplois et des compétences - strategic workforce planning (52% compared with 21% in the other small businesses). 

3.2.3. MEASURES TAKEN AT GOVERNANCE LEVELS (NATIONAL, REGIONAL, LOCAL)

Each VET player has tried to take action quickly to offset the predictable effects of the crisis. However this economic situation has also brought the various players together to act in unison quickly and strengthen the effect of their action.

MEASURES TAKEN BY THE STATE

To combat the crisis, a serie of measures has been taken by the State. These measures have been aimed in particular at supporting economic activity and employment. The following are the main measures.

Various actions and measures have been triggered by the crisis, some of thems are as follows.

MEASURES AS A RESPONSE TO THE CRISIS

The Plan for the relaunch of the economy (plan de relance de l’économie) was implemented at the end of 2008. The measures focus on three objectives: maintaining jobs, stimulating job creation and supporting access to employment.

- Long-Term Short-Time Working (activité partielle de longue durée - APLD) in force since May 1st 2009 aims to encourage companies to organize training for their employees during periods of inactivity and preventing redundancies in periods of economic crisis. It is co-funded by the State and Unédic (unemployment compensation fund). Employees in short-time working are paid at least 90% of their salary during the training.

- The "Bounce back for jobs" plan (Plan “rebond pour l’emploi” in force since 1st June 2010) is aimed at enabling job seekers no longer entitled to unemployment benefit payments to find long-term employment, by offering "bounce back contracts" (funded by the State), paid qualifying training courses and exceptional financial assistance for getting back into work.

The Emergency Plan for Youth Employment (plan d’urgence pour l’emploi des jeunes), includes assistance for companies with fewer than 50 employees when hiring additional apprentices, a bonus for hiring young trainees on open-ended contracts, assistance for hiring young people under 26 years old on a professionalisation contract and assistance for hiring apprentices for employers with 11 or more employees.

The social investment fund (Fonds d'investissement social – FISO) is the first to be specifically created to offset the effects of the crisis. Set up in April 2009, it is aimed to coordinate the State and social partners' efforts in promoting employment and vocational training.
It supports measures such as the APLD (activité partielle de longue durée), the professionalisation contracts, the CTP (contrat de transition professionnelle - professional transition contract) and the CRP (convention de reclassement personnalisé - personalized placement agreement).

In 2010, 107,800 people benefit from the CTP (contrat de transition professionnelle - professional transition contract) or the CRP (convention de reclassement personnalisé - personalized placement agreement). It decreased since 2009, (137,600 people in 2009), due to economic and financial crisis.

If a company with 50 employees or more plans to dismiss at least 10 employees, it must develop a plan to safeguard employment (Plan de Sauvegarde de l’Emploi PSE). In 2009, 2245 have been notified. It is more than double compared with 2008. In 2010, 1195 have been notified. Moreover, when the company is facing serious difficulties, the state can intervene through the conventions of the FNE (Fonds national pour l’emploi – national fund for employment). The aim of this body is to upgrade and retrain employees. In 2010, 33,400 employees dismissed for economic reasons have benefited from these measures (+21% over 2009 and 93% compared to 2008) through reclassification cell, through temporary decreasing allowance (d’allocations temporaires dégressives (ATD), or through FNE (Fonds national pour l’emploi – national fund for employment) -training.

Source: DARES Analysis No. 059 July 2011

Public measures accompanying restructuring in 2009 and 2010: large increase in membership of the CRP and the CTP formation and development of the FNE

A Joint Fund for professional career security (Fonds paritaire de sécurisation des parcours professionnels – FPSPP) was created by the National Inter-professional Agreement (ANI) of 7 January 2009 and resumed by the law of 24 November 2009. It really functions for mid-2010. Its purpose is to direct the funds for vocational training to those people who are greatly in need of assistance: the unemployed and less qualified workers. (See § 10.4.)

MEASURES ACCELERATED BY THE CRISIS

Several measures have been setting up before and have been accelerated by the crisis.

Specific work contracts (called “contrats aidés”), the objective of which is to facilitate access and return to employment for those part of the population most of which lost the contact with employment, have been renewed in 2010.

The unique contract of social inclusion (Contrat Unique d’Insertion – CUI) is set up since January 1st, 2010. It includes all the former assisted work contracts which existed up to now and repealed by the CUI.

Moreover, the actions of employment and skill’s development (Les actions de développement de l’emploi et des compétences - ADEC) have been strongly supported by the state in the professional sectors with high concentration of vulnerable workers. Fifteen national framework agreements were signed in 2009 and early 2010. Seven of them were managed at national level and 8 at regional level. About 150,000 employees benefit from ADEC.

Source: Budget Plan for 2011-Ministry of Employment
The training schemes evolve to match better with the employment and training needs. New measures have been provided in order to increase the number of young people in work study contract. The Law provides for:

- the setting up of a “professions’ student card” to enable apprentices and young people under a professionalisation contract to be eligible to certain advantages,
- the establishment of a free access dematerialized service facilitating actions at administrative level and making easier the relations between employers and the young people when seeking for an apprenticeship contract,
- the possibility to extend the work study contract to other employment categories such as temporary or seasonal work,
- the possibility to renew a short term professionalisation contract with a view to prepare a higher or a complementary qualification.

Other provisions of this law are:

- A duration of trainings well framed. The trainings can not exceed 6 months per year of teaching and they are paid only for a duration over 2 consecutive months.
- A very detailed regulation on how to create new jobs in employers’ groups.
- The creation of the CSP (Contrat de sécurisation professionnelle - the professional safeguard contract) based on the CRP (convention de reclassement personnalisé - personalized placement agreement) and the professional transition contract. The CSP will replace the CTP (contrat de transition professionnelle - professional transition contract). The conditions of application of the new CSP are defined both by the ANI (Accord national interprofessionnel - National Interprofessional Agreement) of 31st May 2011 and an agreement between the State and social partners in negotiations.

Source: Law n° 2011-893 of 28th July 2011 - Law related to the development of work study contract and career security (JO du 29.7.11)
Decree of 28th July 2011 related to the amenity of National Intersectorial Agreement on safeguard of personalised redeployment agreement of 4th July 2011
Decree of 28th July 2011 related to the the professional safeguard contract

MEASURES TAKEN BY THE REGIONAL AUTHORITIES

All regions have been affected by the economic crisis. In order to try to offset its effects, they quickly have taken particular measures with different policy or strategic choices depending on their economic and demographic situation. However there are two major focus areas:

- economic development aids, as creation of specifics funds (i.e.: agreements signed with social partners, strengthening of the existing provisions by increasing financial participation to certain funds)
- jobs and training measures to help companies for maintaining the employees in the employment (ex: measures aiming at specific public) (the initiatives taken by the Regional Council with assistance for jobs and training, mainly targeting companies in difficulty and workers’ jobs).

The European Social Fund (ESF) by co-financing the measures implemented at the national and regional levels is a partner in facing the economic crisis. The funds, 85% of which are assigned at the regional level, allow initiatives developed to preserve jobs. The ESF also provides support for all local authorities.
The ESF, a structural policy tool which showed its usefulness before the recession, has adapted during the recession (contribution to funds, a simplification in the provisions for obtaining funding) and will continue to be useful after the recession.

MEASURES TAKEN BY THE SOCIAL PARTNERS

The social partners have signed two ANI (Accord national interprofessionnel - National Interprofessional Agreement), one on 7 January 2009 on the development of life-long vocational training, professionalisation and career security and the second on 8 July 2009 on HR management of the consequences of the economic crisis on employment. They have created a web site jointly to support employment "Les liens vers l'emploi" (Links to employment). Source: site « www.liens-vers-emploi.fr »

MEASURES BASED ON THE COORDINATION OF THE ACTORS

A greater coordination between the training bodies, training information providers and financers (State, Regional Councils, social partners, companies, public employment service etc) has been observed to mobilise available funds and optimise their use. This is reflected, in particular, by the setting-up of the emergency employment plan by social investment fund (Fiso - see § 3.2.3).

Example of cooperation:

- A State-Region-Social Partners Charter in the Limousin (french administrative region) in 2009
- a framework-agreement signed by the State and the National centre for automotive professions (ANFA) in 2010,
- an amendment extending a sectoral agreement (until 30 June 2011) setting-up a series of exceptional measures signed by the UIMM (professional social partner the Metallurgy Industry) and three trade unions
- a partnership between an OPCA (Organismes paritaires collecteurs agréés - Approved Joint Collecting Bodies) and a chamber of commerce in Lozère in 2010 set up to develop skills and in particular strategic workforce planning.

3.3 Longer term consequences and future responses

It appears that the measures taken by the public authorities in respect of vocational training to try to offset the effects of the economic crisis, by preserving jobs, encouraging training and, creating specific funds for those sections of the population the most exposed to it are one-off measures in response to a specific context. They have been taken using existing mechanisms aimed at facilitating access to training.

4.2 Legislative Framework For IVET

In June 2000 all laws governing education were compiled, forming a single Educational Code, which, for the most part, has taken the place of all previous educational laws. The code contains general and common provisions as well as provisions that apply to different educational levels.

- On February 27th, 2003, the Ministry of Youth Affairs, Education and Research issued a circular highlighting the role of vocational high schools as a key element in promoting vocational and technical education.

- In December 2004, the Ministry of Education presented a bill «about orientation for the future of the School”. The main objective is to insure the success of all the pupils. This means, for example, to lead 100 % of the pupils in the acquisition of a diploma or a recognized qualification, at the end of their compulsory education.

- The law n° 2005-380 of April 23rd, 2005 on orientation and programme for the future of the school aims to:
  - reduce disparities by the acquisition of a common-core competences and by insuring more individualized paths (i.e. in case of redoubling a education’s level, they propose an individual contract of educational success – contrat individual de réussite éducative CIRE);
  - prepare the young people for the employment by a better knowledge of the companies and of the labour market;
- make school more effective by introducing language learning in the primary school and the use of information technologies (creation of B2i - brevet informatique et internet - a computer and internet certificate) into the lower grade school certificate (brevet des écoles) and into the high school diploma.

The objectives have been set to guarantee a qualification to 100% of the pupils and the access of 80% of an age group at the level of the high school diploma, and improve the access to the higher education.

➢ The law of August 10th, 2007 on the freedoms and responsibilities of universities, states especially the spread of autonomy to all universities within five years after the publication of the law.

The boards of directors is divided by 2 (30 people instead of 60) and more open to outside persons (7 or 8).
Universities have a "competence bloc" expanded budgetary and human resources management.
The law provides that universities have the opportunity to regroup themselves after a vote by absolute majority.
The role of the state is redefined and its relations with each university are based on a multiannual contract of establishment.
An active student orientation is set up with a procedure of pre-registration for entry into first year university, but students will be free to enroll in the school of their choice.
The law provides for the establishment in each university of a "help desk for the vocational inclusion of students" in order to "assist students in their search for internships and first jobs."
Moreover, it provides that a "mediator of Education and Higher Education, mediators and their corresponding academic receive complaints concerning the operation of the public service.

➢ The law of November 24th, 2009 has generalized the personal notebook of skills (livret personnel de compétences) to all the junior high schools. It underlines the acquisition of the knowledge and the key competences (competences clés), during the compulsory school.

➢ In September 2009, the “baccalauréat professionnel” (Bac Pro - vocational high school diploma) was reformed.

The main changes are:
• Preparation of the Bac Pro, after the lower secondary education, in 3 years instead of 4
• Two degrees instead of three (disappearance of B.E.P):
  - an intermediate diploma during training (certificat d’aptitudes professionnels - C.A.P)
  - the baccalauréat at the end of the higher secondary school
• Creation of a new pathway between the first year of higher secondary school and the second year of C.A.P

Source:
Note de service n°2009 – 018 du 23/01/2009 (BO spécial n°2 du 12/02/2009)
Décret n°2009-145 du 10/02/2009 relatif au baccalauréat professionnel
Décret n°2009-146 du 10/02/2009 relatif au BEP (Brevet d’Etudes Professionnelles - Professional Studies Certificate)
Décret n°2009-147 du 10/02/2009 relatif au CAP (Certificat d’Aptitudes professionnelles - Professional Skills Certificate)
The “baccalauréat professionnel” can be prepared in 75 specialities and can be obtained via:

- the higher secondary school (IVET)
- apprenticeship
- continuing vocational training
- or validation of non-formal and informal learning (VAE – Validation des acquis de l’expérience), after three years of professional employment in a level at least equal to that of a skilled worker or employee in a professional field related to the purpose of the diploma.

Two laws change many provisions concerning the work study contract. It concerns particularly a financial incentive for companies to recruit young people into apprenticeship or professionalization contact. The objective is also to expand the use of these contract in others sectors and to relax the rules.

4.3 Institutional Framework for IVET and organigram

Source: Académie de limoges

THE NATIONAL LEVEL

The Ministry of National Education is responsible for making educational policy, governing vocational training in schools and through apprenticeship. The Ministry of Agriculture and Fisheries is similarly responsible for professional agricultural training.

The ministry of Higher education is responsible of this education level.
THE REGIONAL LEVEL

The modernization process, which began in the 1980s and was stepped up in the 90s, resulted in the 26 regional councils (regions) taking on a central role in vocational training, particularly for young people between the ages of 16 to 25, for vocational training interns, and for young people working under apprenticeship contracts.

The last law of this process, relative to the liberties and to the local responsibilities of August 13th, 2004 strengthens the role of the regional councils by widening the Regions’ responsibilities in the vocational training of the unemployed adults. Henceforth Regions define and implement the regional policies of apprenticeship and vocational training, not only for young people, but also for unemployed adults.

In order to carry out their new missions, the regions have had to set up their own administrative structures. A division called commission, department, or directorate, concerns vocational training in each regional council. Every 3 or 7 years (depending of the choice of the regions), the regions elaborate a PRDFP: plan régional de développement de la formation professionnelle (regional plan for developing the vocational training) which concerns both initial and continuing training.

In order to promote the co-ordination of vocational training policy and action, French laws 2002-73 dated January 17, 2002 and 2002-92 dated January 22, 2002 instituted regional employment and vocational training co-ordination committees. These committees are made up of state representatives in each region, regional assemblies, management and labour organizations (social partners), and regional consular chambers (agriculture, trade and commerce and industry). Their mission is to promote co-operation between the many actors involved in vocational training in order to ensure better coordination of vocational training and employment policy.

The objective of decentralization was to enable local communities to have some freedom of choice to define standards for their actions and the manner of their interventions. It reflects a new balance in the distribution of powers.

SOCIAL PARTNERS

Social partners have a consultative role in:
- the CPC (Commission professionnelle consultative – Professional Consultative Commissions), with the various ministries responsible for the creation of diplomas and technological and professional certificates;
- the Commission pédagogique nationale [National Pedagogical Commission] for the creation of diplomas awarded by the Instituts universitaires et technologiques [university-level technological institutes] – for two-year programs of study after the high school level;
- the National Expert’s Board for professional Licence – for three-year programs of study after high school;
- the CNESER (conseil national de l’enseignement supérieur et de la recherche - National Higher Education and Research Council) – for all higher education diplomas.
- and the CESR (Conseil économique et social régional - Economic and Social Regional council) Its opinions carry mandatory on almost all areas of the region, including the
CPRDFP (Contrat de plan régional de développement de la formation professionnelle – contract of regional plan for developing the vocational training)

4.4 - Legislative Framework For CVET

For the past 40 years, continuing vocational training has been considered an independent area of labour law. In 1973, the French law dated July 16, 1971 was codified, and CVET related laws have become the ninth and last book of the French Labour Code. Legislative and regulatory provisions related to continuing education and vocational training have subsequently rounded out the new book of the Labour Code.

</table>

Concerning the continuing vocational training for the private sector’s employees, the framework in which regulations are negotiated is specific. First, social partners (trade unions and management) negotiate interprofessional agreements at the national level, and then legislators incorporate all or part of these regulations into a law.
### The Agreements

Continuing vocational training has been subject to negotiation between the French social partners (trade unions and employers’ organization) since 1971. At the national level, trade unions negotiate interprofessional agreements, particularly when they feel reforms are needed. This agreement needs to be signed by all the national social partners.

### Recent Interprofessional Agreements

In 2009, at the interprofessional level, the number of inter-trade agreements has doubled compared to 2008: 53 texts at local, regional and national level, against 26. 34 amendments to previous agreements and 19 new agreements were concluded, of which 11 are national in scope. It is the case of January 7, 2009 agreement on the development of vocational LLL, professionalization and career security and of the 8 July 2009 agreement on the social management of the consequences of the economic crisis on employment.

The ANI (Accord national interprofessionnel - National Interprofessional Agreement) was concluded on January 7th, 2009. This agreement, which focuses on vocational lifelong learning, modified the previous interprofessional collective agreement related to continuing vocational training (December 5th, 2003 agreement). The principal additions included in the agreement concern:

- The portability of individual training right for employees (DIF); (see § 2.1.1)
- the possibility for employees to attend training courses outside working hours;
- the creation of a new fund: the FPSPP (Fonds paritaire de sécurisation des parcours professionnels - Joint Fund for professional career security) for the training of employees and unemployed people of the private sector.

Most of the provisions of this agreement have been integrated in the law of 24 November 2009 concerning the life-long guidance and training.

Thus, the law defines the resources used to create a measure for securing careers for the groups most isolated from employment. The principles laid down by the social partners in 2008 are included.
FORMER INTERPROFESSIONAL AGREEMENTS

The “five-year law” dated December 20th, 1993 and the National Interprofessional Agreement of December 5th, 2003 have strengthened professional branches’ power to take initiatives, in particular by allowing them to take action (adapted to the needs of each professional branch and company) in a wide variety of areas such as the implementation of mechanisms to raise funds for vocational training.

The French law dated January 17th, 2002, known as the “social modernisation law,” includes provisions related to interprofessional negotiation of continuing vocational training priorities, goals, and resources. These negotiations must now also include training to ensure that employees are able to adapt to changes in their jobs, the acquisition of new skills, and the objective-based upstream management of positions within the company.

4.5 Institutional Framework: CVET

THE STATE (NATIONAL LEVEL)

The Ministry for Labor, Employment and Health, is responsible for vocational training for young people entered on the labour market, as well as for private-sector employees.

This Ministry is organised into various departments, offices, and directorates whose mission is to ensure that the vocational training-related policies are implemented.

Actually, there is no centralised national authority in the area of continuing vocational training. However, the law relative to the liberties and to the local responsibilities of August 13th, 2004, established the CNFPTLV (Conseil national de la formation professionnelle tout au long de la vie - National Council of Vocational LLL). It provides the possibility of dialogue between State, social partners and representatives of the regional councils. It’s a public body, depending on and financing by the Prime Minister, but the CNFPTLV (Conseil national de la formation professionnelle tout au long de la vie - National Council of Vocational LLL) is independant and can express negative opinions on the texts which subjects him the State.

- Its main aim is to monitor and assess the implementation of the continuing vocational training (CVT) and apprenticeship by:
  - evaluating the regional vocational lifelong learning and apprenticeship policies;
  - giving its opinion on future vocational lifelong learning and apprenticeship legislation;
  - writing annual reports on vocational lifelong learning and apprenticeship, and on use of funds;
  - controlling the good using of these funds.

The evaluation of training devices is a concern shared by those involved in vocational training. The law of 24 November 2009 on the guidance and training brought the realization of a review and evaluation by the CNFPTLV (Conseil national de la formation professionnelle tout au long de la vie - National Council of Vocational LLL).
Now, each year, this structure will also establish a balance, by employment area and region of the training activities which were conducted by all agencies providing such actions. This assessment is based on evaluations submitted by each regionally Regional Coordinating Committee on Employment and Vocational Training (CCREFP - comité de coordination régionale de l'emploi et de la formation professionnelle – see below).

Pôle Emploi – the National Employment Agency is an institution affiliated with the State for placement of job seekers and funding their training.

THE REGIONS

The regional Council

Since 1982, the 26 regional authorities (regional council) have the full competences to implement the CVET policies, on their own territories.

They establish their own continuing vocational training policies. Each region draws up a regional training development plan (PRDF – see below the CPRDF) in order to coordinate the different areas of vocational training for young people, both initial and continuing, unemployed and adults at a regional level. The plan is based on an active partnership between all concerned parties. The president of the Conseil régional [regional council] is responsible for setting up consultive meetings with management representatives and trade-unions, among other organisations.

Since the Law of January, 2002, they can be help by the CCREFP (comité de coordination régionale de l'emploi et de la formation professionnelle - Regional Coordinating Committee for Employment and Vocational Training). This body has to develop the dialogue between the various regional actors, to provide a better coordination of the policies concerning professional training and employment.

The law of 24 November 2009 defines the rules for policy coordination of the different actors of vocational training, strengthening the control of the fundings by the state and creates new penalties for the non-respect of CVET rules.

The contract of regional plan for the development of vocational training

The law of 24 November 2009 changed the plan (PRDF) in contract (CPRDF).

State and each regional council will conclude for a period of six years, a regional contract for the development of vocational training - contrat de plan régional de développement de la formation professionnelle (CPRDF). Annual conventions are planned for implementation and clarification of information.

On August 31th, 2011, 11 regional councils have signed a CPRDF with the State.
The objective of the CPRDF and the actors remains the same than the PRDF. But now, this programming tool of the regional policies concerning training is a document signed by:

- the president of the Regional Council after consultation of local authorities and adoption by the Regional Council,
- the representative of the State in the region in the name of the State
- and the regional representative of the ministry of national education.

Before the reform, the Regional Council had a flexibility about the duration of its plan (in practice voted for three to seven years). For June 1st, 2011, the PRDFP became a contract and must be adopted for a duration of six years. Exceptionnaly, the first CPRDF will be concluded for a duration of three years to be in phasis with the next election of the representatives of the regional council (June 2014).

The CPRDF is elaborated by the Region within the CCREFP (comité de coordination régionale de l'emploi et de la formation professionnelle - Regional Coordinating Committee for Employment and Vocational Training) on the basis of documents presented by:

- Chairman of the Regional Council;
- The prefect of region;
- The academic authority;
- The social partners.

**THE SOCIAL PARTNERS (SP)**

The social partners are main actors in the field of the French VET. They have different kinds of actions or role.

**The social partners’ authorities**

There are two SP labour-management authorities in charge of coordinating and regulating training-related issues:

- The Comité paritaire national pour la formation professionnelle - CPNFP [National Joint Committee for Vocational training] in charge of ensuring that vocational training programs run smoothly and that collective agreements are duly applied within the framework of continuing vocational training’s agreements
- Joint Fund for professional career security (Fonds paritaire de sécurisation des parcours professionnels– FPSPP), under the law of 24 November 2009. The FPSPP is a fund for financing training (see § 10.4) but also a national authority coordinating the actions of the OPCA (Organismes paritaires collecteurs agréés - Approved Joint Collecting Bodies) and especially the Fongecif.

At national level, SP manage “Unédic” and by this way a part of the fundings for unemployed people training. The new unemployment insurance agreement concluded by the labour organisations and approved by the state took effect in 2010 and includes important provisions for the training of job seekers (National Interprofessional Agreement concluded on January 7th, 2009 – see chapter 10).
At the professional or economic sectors’ level, SP manage:

- the CPNE (Commissions paritaires nationales de l’emploi - National Joint employment Commission). Created in each sector by a national professional agreement, each CPNE is a cooperative authority between management representatives and labour-unions. They define annual training policies but can also create sectoral certification called “certificat de qualification professionnelle” or CQP.

- the OPCA (Organismes paritaires collecteurs agréés - Approved Joint Collecting Bodies), which collect funds and the companies’ mandatory contributions within the framework of their continuing vocational training plan (CVT) see § 10.4.

- the prospective observatories of occupations and qualifications (observatoire prospectif des métiers et des qualifications - see §2-1-2). Each economic sector has his own observatory.

Negotiation of agreements

At a national level, the social partners negotiate and sign many agreements as the National Agreement, l’Accord national interprofessionnel ANI (Accord national interprofessionnel - National Interprofessional Agreement) of 11 January 2008 on the modernization of the labor market and the national interprofessional agreement ANI of 14 November 2008 on the management of jobs and skills.

The negotiation of sectoral agreements is an important achievement of the social partners. Within the professional sectors, social partners should prioritize some measures as the individual right to training (droit individuel à la formation DIF) or the goals for professionalization of shares offered to employees.

Consultative role

When the State sets priorities for continuing vocational training and apprenticeship policies on a national level, it must first consult its partners, including labour organisations and employers’ representatives, within the framework of the CNFPTLV (Conseil national de la formation professionnelle tout au long de la vie - National Council of Vocational LLL).

They sit in a set of committee for training:

- the CPC (commissions professionnelles consultatives - professional consultative commissions) of the various departments that create diplomas and degrees of technological and vocational education;

- the National Education Committee for the creation of degrees awarded by polytechnics (Level Isced III);

- the National Commission of expertise for professional licenses;

- the National Council of Higher Education and Research for all degrees of higher education.
They sit in a set of committee for employment

- the Board of Directors of National Body for Employment (Pole emploi) includes representatives of social partners and the state.

the National Employment Board Conseil National de l'Emploi (CNE) was created in 2008. It is chaired by the Minister for Employment and composed of social partners, state officials, representatives of local and qualified individuals. This Council is responsible for the strategic management of employment policies and ensure the overall coherence of the system.

Technological education prepares specifically for higher vocational education.

Vocational education trains students to attain a professional qualification (certified by a diploma).

In France, the school system is under the responsibility of the Ministry of national education, (Ministre de l'éducation nationale). Initial education is free of charge in State schools. It’s initial training from pre-elementary school until at least the end of lower secondary school (or the age of 16 years) and in most a doctorate. The principle wants that, the young people who leaves (or drops out) initial system, cannot return there.

School is compulsory between the ages of 6 and 16 but most children go to nursery from the age of three, and some of them can be in initial training until 25 or 30 years old, if they decide to prepare a doctorate..

PUBLIC PRE-PRIMARY OR NURSERY SCHOOLS

Public pre-primary or nursery schools are under the responsibility of the Ministry of national education and are free of charge. At private schools, attended by 1.5% of children, parents pay some school fees.

Nursery school belongs to the initial education phase. As a general rule, children are grouped by age into three sections: small section (3-year olds), medium section (4-year-olds) and big section (5-years-olds). The main educational points of the activities contribute to the child's overall development and as a preparation for primary school. 85,3 % of children are trained in state schools.
PRIMARY SCHOOL

At 6 years old, they begin primary school for 5 years before leaving to go to the junior high school at the age of 11 or 12.

Curricula are national and compulsory for all teachers and pupils. Since 1990, competencies set for pupils are organised according to educational stages (see below).

Assessment tools are provided for teaching staff who thereby have national references to measure the progress of all pupils and better identify those encountering problems.

On entering primary school (CP (cours préparatoire – first class) and CE1 (cours élémentaire 1ère année – second class) of the basic learning stage), as well as studying French and mathematics, priorities at primary school, there are foreign languages, activities for finding out about the world, artistic activities (visual arts and music) as well as the history of the arts, physical education and sports and in some schools a regional language.

During the further learning stage (CE2 (cours élémentaire 2ème année – third class), CM1 (cours moyen 1ère année – fourth class) and CM2 (cours moyen 2ème année – fifth class), literature, history and geography, experimental science and technology become more clearly defined. Information and communication technologies are tools used for various school activities whose ownership to the computing and internet first level certificate (B2i - Brevet informatique et internet - IT and internet certificate).

SECONDARY SCHOOL

Junior high school is the lower secondary level establishment which takes in all pupils leaving primary school with no examination. All pupils are offered a school place. Its primary goal is to ensure that pupils achieve, as a minimum, a command of the common core of knowledge and competencies.

The four years (sixième (year 7) - cinquième (year 8) -quatrième (year 9) - troisième (year 10)) are compulsory education at junior high school.

At the end of year 10, pupils take the diplôme national du brevet (national junior high school certificate) which evaluates the knowledge and competencies learned in junior high school and certifies a command of the common core of knowledge and competencies. A large proportion is given over to continuous assessment and there are three written tests in French, mathematics and history-geography-civic education.

On leaving year 10 in the junior high school, two paths are open to pupils

1. The general and technological path which leads onto higher education. Students join a class in seconde (year 11) of a lycée général et technologique (general and technological high school). This class constitutes the determining stage. It is undertaken by all students intending to do general or technological studies. At the end of this year, students enter the final stage made up of the year 12 and year 13 classes leading to the general or technological baccalauréats.

2. The vocational path which allows entry to the world of work or a continuation of studies. As pupils in general and technological high schools, students join a year 11 class to study for the vocational baccalauréat (bac professionnel) (three years of study since the 2009 school year) or their first year of study for the vocational aptitude certificate (certificat d’aptitude professionnelle) which requires two years of study.
Via an apprenticeship, young people can study for these same vocational diplomas through alternance training in a CFA (Centre de formation d'apprentis - apprentice's training center) and in a company.

Both path give access to higher education.

**THE GENERAL AND TECHNOLOGICAL PATH**

The general and technological path is pursued in the general and technological high schools (lycées) by studying for one of the three general baccalauréats: economic and social (ES), literature (L) or scientific (S) and/or one of the seven series of the technological baccalauréats or vocational training certificates (brevet de technicien).

At the end of the general and technological path, students can decide to embark on long (e.g. at university) or short studies. They may join a higher vocational section (STS - section des techniciens supérieurs) for a two-year study programme leading to an advanced vocational certificate (BTS - Brevet de Technicien Supérieur - Higher Technician's Certificate) or in technological university institutes (Instituts universitaires technologiques - IUT) to a DUT (Diplôme Universitaire de technologie - Technological University Diploma).

**THE VOCATIONAL PATH**

The vocational path offers non-academic education linked to businesses and their professions. It enables vocational competencies to be acquired as well as knowledge and expertise in a vocational field.

Studies for vocational examinations can all be undertaken within the school system in vocational high schools (lycée professionnel - LP), or through apprenticeships.

As school pupils, in vocational high schools (lycée professionnel), students join a year 11 class to study for the vocational baccalauréat (bac professionnel) in three years or their first year of study for the CAP (Certificat d'Aptitudes professionnelles - Professional Skills Certificate) in two years. Through an apprenticeship, young people can study for these same vocational diplomas with alternance training in a CFA Centre de formation d'apprentis - apprentice's training center) and in a company. Since the start of the 2009 school year, the vocational path has been revised. This revision aims to promote the raising of young people's qualification in the vocational path, to improve their ability to get a foot on the professional ladder and make short higher educational studies more accessible for them.

The main measure consists of changing the duration of the study programme for taking the vocational baccalauréat and bringing it into step with the general and technological baccalauréats. It will henceforward be in three years following on from the year 10 class instead of four years as previously.

At the end of their final year, the students take the vocational baccalauréat, a national examination which allows them to obtain, as for the other baccalauréats, the end of secondary school studies diploma and gain their first step towards higher education. An intermediate certificate (CAP – (certificat d'aptitude professionnelle -vocational aptitude certificate) is taken during the study programme in order to encourage students to stay within the education system.
For greater flexibility, permeability is made possible:

- between two paths, in both directions,
- between the two stages of the vocational path, CAP and vocational baccalauréat,
- between training as school pupils and apprenticeship status.

Comparing to 2009, the number of apprentices vary according to the level of the diploma. The reform for apprenticeship implemented on the new start year 2009 has suppressed a great number of BEP (Brevet d'Études Professionnelles - Professional Studies Certificate). It benefits the vocational 3 years baccalauréate. This reform has caused changes in the evolution of level IV and V. In 2010, the level V records a drop of 8,3% linked to the loss of 15 650 BEP apprentices, the IV level is increasing by 8% given the growth of apprentices on vocational baccalauréate (+15,7%). The level III increases by 2,5% thanks to the BTS (Brevet de Technicien Supérieur - Higher Technician's Certificate), the level II, 5% with a growth of 12,9% for the Bachelor diploma and the level I increases by 25,9%. For this latter level, all the trainings have more apprentices.

Source: RERS 2011
5.2 IVET at lower secondary level

This level does not lead to a vocational qualification. There is no professional education at the lower secondary level. However, there are programmes aimed initiating students in different work sectors. They are called "itinéraires de découvertes" (discovery pathways). Pupils spend about 10% of their education in companies.

5.3 IVET At Upper Secondary Level (School-Based And Alternance)

On leaving year 10 in the junior high school, two paths are open; 1- The general and technological path which leads onto higher education, 2 - the vocational path which enables entry to professional life or a continuation of studies including higher education..

VOCATIONAL DIPLOMAS: PARTICIPANTS, PROCESSES AND METHODS

Diplomas issued by the Ministry of National Education are national and are worth the same whether they are acquired in initial education (school or apprenticeship), in continuing training or by a validation of professional experience.

The Ministry of National Education creates and manages the diplomas centrally.
Regionally, the regional education authorities (académies) organise the national examinations. A panel appointed by the chief education officer (recteur) checks the results of the tests, finalises the proposals for marks obtained and, for each candidate, proposes to the administrative authority (the chief education officer), the award of the national diploma. The panel is made up of professionals and teachers.

THE DESIGN OF THE VOCATIONAL DIPLOMAS

Professionals contribute with the State to the design of the diplomas within CPC (Commission professionnelle consultative - Professional Consultative Commission). These national bodies are the designated place for the mandatory consultation of the social partners for all vocational diplomas (from the CAP - Certificat d'Aptitudes professionnelles - Professional Skills Certificate to the BTS - Brevet de Technicien Supérieur - Higher Technician's Certificate). The CPCs are made up of 4 colleges: employers, employees, public authorities and qualified persons. Their members give an opinion on the timeliness of the creation, renovation or abolition of a diploma.

Currently 14 in number, the CPCs correspond to the major sectors of economic activity and they follow changes in the employment market.

Moreover, businesses host young people in training, with a different degree of involvement according to whether they are students or apprentices.

Businesses take part in the certification process: the tests which involve professional practice are corrected by the teachers and representatives from businesses. The diploma is issued by a final panel on which business members also sit. They also take part in the funding of initial and in-service vocational training.

OBTAINING VOCATIONAL DIPLOMAS

In the case of initial (as well as the continuing training), people, depending on their status, take examinations either through external tests (one-off written, oral and practical tests), generally organised in June, or through internal tests (CCF - tests during training).

Moreover, any person who has worked for at least three years is able to obtain all or part of a diploma or certificate for a vocational purpose by validating what they have acquired through vocational and personal experience. An individual procedure, this validation request for what has been acquired through experience (validation des acquis de l’expérience - VAE) is based on an evaluation by a panel of a candidate file and, if necessary, a supplementary interview. The panel which is sovereign, awards all or part of the diploma.

EDUCATION PROGRAMMES

The education programmes present a combination of vocational and general competencies and knowledge indispensable for high-quality vocational training. In the vocational field, these are the competencies for the profession in question (techniques, technical and scientific knowledge, expertise, attitudes and behaviour).
In the field of general competencies, these are knowledge and expertise which range from literature to science and the arts which constitute the common core for all training whether this is general or vocational.

The goal is to give the students the competencies and associated knowledge necessary for the award of the diploma in question but also to enable them to acquire a basic general education that will make their later vocational development easier.

**CLASSIFICATION OF DIPLOMAS**

The national vocational diplomas are classified by level:

<table>
<thead>
<tr>
<th><strong>French Classification</strong></th>
<th><strong>Level of Training</strong></th>
<th><em><em>ISCED</em> Equivalent Classification</em>*</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Level 5</strong></td>

<td>6</td>
</tr>
<tr>
<td><strong>Level 1</strong></td>
<td>master's type degree (such as an engineering diploma)</td>
<td>6</td>
</tr>
</tbody>
</table>

* International Standard Classification of Education (ISCED) created by UNESCO. A vocational diploma is a type of certificate for which the general framework is defined by decree.

** The Mention Complémentaire is a national diploma which aims at giving to his(her) holder a specialized qualification. The access to the training is offered to people already holders of a first diploma of the professional or technological training. The examination contains necessarily three professional tests.

**THE TEACHING ORGANISATION OF INITIAL VOCATIONAL TRAINING**

Education given for the vocational path includes many points in common with those of the technical and general paths: further study of the same general subjects and the same preparation for their role as citizens.

However, the professional purpose entails using specific methods and means, in particular alternance training. This is a training arrangement characterised by periods of training shared between education establishments and companies.
Alternance training programmes are an integral part of the vocational training of young people, as school pupils or apprentices. It is a key element by promoting the acquisition of competencies and associated knowledge and making a foothold on the career ladder easier.

**THE ORGANISATION OF EDUCATION**

For young people at school, training takes place mainly in the teaching establishment (LP - professional secondary school or LP agricole - agricultural secondary school) and includes compulsory training periods in a professional environment (work-based learning).

The organisation and content of vocational education are specific. All the vocational diplomas (CAP - Certificat d'Aptitudes professionnelles - Professional Skills Certificate and BP - Brevet de technicien - Technician's Certificate) apart from the mention complémentaire - additional diploma include:

- general education: French, history-geography, mathematics, physical science, a foreign language, applied art, physical education and sport. Moreover, "Prevention, Health and Environment" education has been introduced since the beginning of the 2009 school year.
- theoretical and practical teaching defined specifically for each professional specialism, in terms of competencies and knowledge to be acquired.
- project activities: in CAP(Certificat d'Aptitudes professionnelles - Professional Skills Certificate), the multi-disciplinary project of a vocational nature (PPCP) consists of the whole or partial completion of a product or a service. The place given to general education is important. It is a preferred means of assisting students in acquiring working and study methods, developing their initiative, team work, a sense of organisation, responsibility, strengthening professionalisation and motivation. For a vocational baccalauréat, the project activities are also compulsory but may take on various forms (PPCP, a specific general education project, vocational education, artistic and cultural education etc).
- training periods in a vocational environment (PFMP): all the professional training includes a training period in a professional environment (business or other organisation) for better preparing young people for employment, formalised by an agreement relating to training in a professional environment signed by the hosting organisation, the school and the student. The duration of these periods varies depending on the type of diploma and the specialism: 12 to 16 weeks for the CAP (Certificat d'Aptitudes professionnelles - Professional Skills Certificate), at least 12 weeks for the mention complémentaire (additional diploma) and 22 weeks for the vocational baccalauréat. The PFMPs undergo evaluation (carried out jointly with the company) which is taken into account for the award of the diploma.
- a specific organisation of the timetable: the total training time, including the time spent in the company varies according to the diploma (around 2,300 hours for the CAP - Certificat d'Aptitudes professionnelles - Professional Skills Certificate) over a 2-year learning stage; nearly 3,500 hours for the vocational baccalauréat over a 3-year learning stage).

### 5.4 Apprenticeship Training

"The apprenticeship contract is a particular type of employment contract made between an apprentice and an employer. The employer undertakes, apart from the payment of a salary, to provide the apprentice with complete vocational training, given in part within the company and in part in an apprentice training centre or apprenticeship department of an education establishment. In return, the apprentice undertakes for his training, to work for this employer for the duration of the contract and to do this training course" (article L. 6221-1of the labour Code)

Apprenticeship contracts are mainly aimed at young people under 26 in initial training. They enable diplomas or certificates listed in the national directory of vocational certificates to be obtained which range from the CAP (Certificat d'Aptitudes professionnelles - Professional Skills Certificate) (level 5 in the 1969 French nomenclature, equivalent to level 3 of the European certification framework) to diplomas awarded by universities or 'grandes écoles' (selective universities) (level 7 or 8 of the EQF).
This contract, that may be entered into with an employer from the private or public sector (local authorities, hospitals, the armed services etc), is for a period of between one (apart from exemptions) to three years depending on the duration of the training stage being studied for and the apprentice's initial qualification. In 2006, 72.7% of apprenticeship contracts signed, are for a period of between one and two years, 15.2 are shorter than a year (Source: DARES). It may be modulated according to the initial skill level of the youngsters.

Apprentices are aged between 16 (end of compulsory education) and 25. These age limits may however be brought forward (in particular where the first stage of secondary education has been completed) or put back in certain cases (disabled workers and creators of companies for example).

The theoretical training period in an apprentices' training centre (CFA) (managed by a local chamber of commerce, a professional sector etc), apprenticeship department (in vocational high-school) or in an apprentices' training unit (in higher education) cover around 25% of the duration of the contract (a minimum of 400 hours per year). 51.5 % of CFA are private, 32.8 of CFA are controlled by chamber of commerce and industry or of Agriculture, 12.5 by public school or university. CFAs CFAs (Centre de formation d'apprentis - apprentice's training center) are subject to the educational supervision of the State (Ministère de l'éducation nationale) and the technical and financial supervision of the State or the regional authorities.

Training is mainly funded through an apprentice tax paid by all businesses. An employer may, moreover, benefit from exemptions from payroll contributions, consideration paid by the départment council and other financial incentives according to the case and the economic situation in the apprenticeship market.

The period of practical training in the company is carried out under the responsibility of an apprentice supervisor who fulfils the role of tutor and has the teaching and vocational competencies required by the law. In the event of the employer or apprentice supervisor not complying with their obligations, the apprenticeship contract may be suspended or even terminated by the labour inspectorate.

Apprentices are paid from between 25% to 78% of the minimum salary according to their age and progress in the training stage.

On February 2010, 8 months after leaving a CFA (Centre de formation d'apprentis - apprentice's training center), 70% of the apprentices (with all types of qualifications) were in employment.

In 1st February 2010, 60,5 % of the leavers who achieved their apprenticeship at the start of new school year 2008 are employed, against 64,2% the previous year.

54.8% were in unassisted employment, 5.7% were in assisted employment, 2.9% were involved in training periods, 36.7 % were jobseekers.

Source: DEP (Direction de l'évaluation et de la prospective - Direction of the assessment and the prospective) Ministère de l'éducation nationale, de l'enseignement supérieur et de la recherche, RERS 2011).
5.5 Other Youth Programmes And Alternative Pathways

Some programmes are specifically tailored to facilitate the integration of young people aged 16 to 25, without or with inadequate qualifications on the labour market. The aim is to help them to get a job.

For the last 20 years or so, considering the high level of unemployment for young people, alternative job-study programmes have been organised. These are organised either as part of a work contract, or as part of an internship. In the former case, the young people have employee status, while in the latter, they are interns in vocational training.

Alternative job studies fulfil three priorities:

- offer a remedy to unemployment amongst young people with few or low qualifications;
- foster their entry in the job market;
- enhance their vocational profile (job suitability, access to qualifications).

Until September 2004, three different programmes were offered to young people, depending on their needs. In 2002, 186 600 young persons were hired through these contracts.

As of October 2004, a new contract - the "professionalisation contract" has replaced the three previous contracts.

Once the professionalization contract is signed, the employer has to provide the young person a job for the specified time (from 6 months up to 24 months) and training that will help him/her to gain a "recognised vocational qualification": vocational studies diploma, nationally recognised or certifications recognised by sectors.

Source: Dares, Analyses, July 2010 N°047

The general, vocational or technological courses must account at least 15% of the total contract time. This percentage may be adjusted up to 25 % upon agreement of the work sectors.

5.6 Vocational Education And Training At Post-Secondary (Non Tertiary) Level

Post secondary (non tertiary) level is offered to youngsters after the baccalaureat and lasts for 2 years.

Senior technical sections in lycées offer courses over a two-year period in the BTS (Brevet de Technicien Supérieur - Higher Technician's Certificate), which is designed to give access to employment.
In addition, technology university institutes attached to universities also offer two-year courses to obtain a professional qualification called the DUT (Diplôme Universitaire de technologie - Technological University Diploma).

30% of the total time is dedicated during the first year to general subjects, 33% during the second year. Otherwise work experience schemes lasting from 4 to 6 weeks are part of the curricula.

5.7 Vocational Education And Training At Tertiary Level

Higher education is possible in universities, public or private higher colleges, some of which are called grandes écoles.

Universities accept students without any selection process - except for medical, dental and pharmaceutical disciplines and technological university institutes. The entry requirements are the baccalauréat, or the diplôme d'accès aux études universitaires - DAEU (Diplôme d'Accès aux Etudes Universitaires - diploma to access to university's education) - see § 1.5 or an equivalent qualification. It’s not possible to access to high education with a CAP (Certificat d'Aptitudes professionnelles - Professional Skills Certificate), BP (Brevet de technicien - Technician's Certificate) or a “mention complémentaire”.

Studies are split into semesters and course units for which the student is awarded credits.

A degree is awarded to students who obtain 180 credits, normally over a period of three years. 300 credits are needed to obtain a masters degree - or 120, more than needed for a first degree, over two additional years study.

There is a professional master degree leading to employment, and research masters which permit following a doctorate over a three-year period.
According to the Bologna process, France began to adapt the diplomas on 3 levels (licence, master and doctorate). There is also a vocational licence leading to employment, and research masters which permit following a doctorate over a three-year period.

- **Technology university institutes** attached to universities have a student selection process and prepare them in two years for a DUT (Diplôme Universitaire de technologie - Technological University Diploma) designed to provide entry into working life. DUT (Diplôme Universitaire de technologie - Technological University Diploma) designed to provide entry into working life.

Students who graduated *DUT* can study for a further one-year period to obtain a new qualification created in 1999 under the Bologna process to build a European higher education area.

University enrolment rights are limited and some students can obtain a financial assistance in the form of grants based on social criteria, university criteria or of interest-free loans on trust.

- There are also **establishments supervised by the various ministries** which have selective process and provide higher education.

These establishments offer short forms of education: in technology, business and paramedical disciplines or a high level long-term education: political institutes, engineering schools, business and management schools, veterinary schools etc.

- **Private establishments** must be issued with a legal declaration of opening. These establishments are highly diversified and have in common a rigorous selective process.

Entry to the most prestigious *higher education colleges*, known as "grandes écoles" is by competition prepared in two years in Classes préparatoires aux grandes écoles – CPGE (Classes préparatoires aux grandes écoles - preparatory classes).

6. CONTINUING VOCATIONAL EDUCATION AND TRAINING FOR ADULTS

6.1 Formal Education

6.1.1 GENERAL BACKGROUND (ADMINISTRATIVE STRUCTURE AND FINANCING)

OBJECTIVES

Continuing vocational education and training “is intended to help workers adapt to changing techniques and working conditions and foster their upward social mobility by opening them to the various levels of the economy, society and culture” (Labour code art L.6311-1). CVET is open to any individual who has exited the initial training system to enter the job market. CVET concerns people already in the work force (staff in both the private and the public sectors, non-salaried workers) and those about to enter the work force (job-seekers).

CVET aims to:
- make it easier to adapt to changes in working techniques and conditions;
- maintain or improve adult's vocational qualification;
- assist adult's social or professional promotion.

The 24th November 2009 law related to lifelong guidance and vocational training has two mains objectives:
- Due to the 150 000 leaving school people without qualification or with a low level of qualification this law enables people to obtain one level of qualification
- In order to improve the articulation between the policies of the various actors occurring in the field of the CVET, this law is based on a coordinated national strategy

FUNDING (see chapter 10)

There’s a co-responsability for funding. Companies finance the training for the employees. State and regional councils finance the training for unemployed and vulnerable people

COORDINATION

Different tools of coordination between vocational training and labor market exist at regional level:

The CCREFP (comité de coordination régionale de l'emploi et de la formation professionnelle - Regional Coordinating Committee for Employment and Vocational Training), created by the law of social modernization of 17 January 2002, are four regional fora bringing together all stakeholders on the scope of training including the partners representing the economic sector.

The OREF (Observatoires régionaux emploi-formation - regional Observatories for job and training) were established by the contract plans with the regions since 1989. They bring together different services in a region: regional council, departments, services of the National Institute of Statistics and Economic Studies, the Ministry of Education, some chambers of commerce and social partners. Their role is to collect data on employment and training for a prospective analysis of trades and qualifications in each region.
Furthermore, the social partners have set up joint bodies at the national level, the sectors and at the regional level to harmonize, coordinate and regulate the mechanisms of vocational training:

- The Joint National Vocational Training Committee (Comité paritaire national de la formation professionnelle CPNFP), created by the Agreement of 3 July 1991, ensures regular monitoring of the inter-national agreement on employee access to training throughout life;
- Joint National Employment Commissions (commissions paritaires nationales de l’emploi CPNE) contribute in each branch or cross-sectors to the definition of training policy (definition of policies and priorities);
- The joint inter-regional employment commissions (commissions paritaires interprofessionnelles régionales de l’emploi - Copire) perform the same role at the regional level in cooperation with the CPNE (Commissions paritaires nationales de l’emploi - National Joint employment Commission).

For all this bodies - see § 4.5.

ASSESSMENT AND CONTROL

The programmes and measures that receive State funding (employment ministry’s budget, national agency for the social cohesion and the equality of opportunity (Agence nationale pour la cohésion sociale et l’égalité des chances _ACSE) established by the Law of March 31st, 2006 for the equality of opportunity (please see 1.2)) are monitored and evaluated by the relevant managing and co-ordinating bodies. Among others, there are:

- The Offices Pôle emploi, employer-employee organisations that manage the unemployment insurance system within each region and for the training programmes that they finance, have set up an evaluation system based more specifically on how successfully the unemployed are re-oriented into new fields. In addition, in cooperation with the National Association for Adult Training - AFPA, they perform quality controls to ensure that the training offered is indeed achieving the stated objectives.
- The regions – they also perform quantitative and qualitative monitoring as they are responsible for the training policies that they have set up.

The diversity of financing options for adult continuing vocational education and training (CVET) makes it particularly difficult to perform a global assessment, as each measure (State, regional, company-based) is monitored by the government authority or financial sponsor who implements it.

A number of statistics are gathered and monitored by the Ministries of Education and Labour and by CEREQ (Centre d’études et de recherches sur les qualifications - Center of studies and research for the qualification) and INSEE Institut National de la statistique et des etudes économiques -. They provide a basis for evaluating adult continuing vocational education and training.

About three fourth of job seekers find again a job different from their previous one but according to their qualification or profession. 37% of people find again a job in a profession requiring more/another qualification, and therefore a retraining.
The trainings attended by job seekers are longer and often lead to a diploma, a certification or a qualification different from those attended by employees (37% against 16%). The job seekers have more difficulty to access training than employees (32% against 44%).

6.1.2 MAJOR CHARACTERISTICS OF FORMAL CVET

In France, except for specific groups (disabled, illiteracy), there is no training program at the national level.

By against, at the regional level, regions are developing their training program through the Regional Development of Vocational Training - Programme régional de développement de la formation professionnelle- Prdfp.

The 24th November 2009 law related to guidance and lifelong vocational training provides that the Regional contract for the development of vocational training – contract de plan régional de développement de la formation professionnelle (CPRDF) replace the regional training development plan (PRDF – Plan régional de développement de la formation).

THE MAIN ACCESS PROCEDURES FOR TRAINING AND QUALIFICATION PROGRAMMES

Access to individual training is conditional upon the applicant’s situation and the specific training and qualification problems that they may encounter. The social partners and the State have designed and established a number of different programmes, which fall into one of two categories: training for jobseekers and training for active workers (private sector employees, civil servants and the self-employed).

Training for jobseekers comes in two main shapes: (a) training sessions (or traineeships), and (b) special work contracts that integrate training (such as alternating job-study training programmes for first-time jobseekers under age 26 or for long term jobseekers).

(a) On the one hand, they can take part in training sessions, free of charge thanks to funds from public authorities or Unedic which is an organisation managed by the social partners;

(b) On the other hand, special work contracts as “contrat de professionnalisation” or “contrat initiative emploi” organise a practical training in firms and a theoretical one with a training provider. During this contract, the employee receives a percentage of the legal minimum wage. The State finances exemptions from national social insurance contributions granted to companies (same advantages as for the apprenticeship contract).

Training for active workers may be:
- chosen by the employer as part of the enterprise’s “training plan”;
- chosen by the employee and taken in the form of “training leave”, the most widespread version of the latter being Individual Training Leave (CIF - congé individuel de formation). The 24th November 2009 law related to lifelong guidance and vocational training gives the opportunity to an employee to follow a CIF – individual training leave - outside of working hours, in parallel with his work.
negotiated between the employee and the enterprise, individual training right benefit (droit individuel de formation - DIF). This third category is new, settled by the law of May 4th, 2004. One important component of this law states that vocational training may take part partially or entirely outside working hours, with a specific allowance. The 24th November 2009 law related to guidance and lifelong vocational training provides the use of the DIF after the working contract breaking off.

In France, the CVT is different depending on the private sector and the public one.

**ACCESS TO TRAINING FOR PRIVATE-SECTOR EMPLOYEES**

In the private sector, CVT is managed by both enterprises and the social partners. Its main characteristic is the fundamental distinction between the training plan, which is established at the company's initiative, and the individual training leave, which is taken at the employee's initiative. In addition to these two major components, the system also includes other, less common programs but especially a third main entryway created in 2004: the individual training right (droit individuel de formation - DIF) negotiated between the employee and the employer.

French employers are not required to train their employees, but they are legally obliged (a strong incentive) to contribute with funds to continuing vocational training. The financial contribution of enterprises to the development of CVT is actually the sum of several contributions. (see 10.2)

The law states that mandatory contributions to CVT development must be equal to 1.6% of total payroll in companies with 20 employees or more, and 0.55% of payroll for enterprises of less than 10 employees and 1.05% of payroll for companies with 10 to 19 employees. It should be noted that certain business sectors have set mandatory contribution levels at a rate higher than the legal minimum, through a joint agreement. The enterprise may decide to fulfil its obligation by paying all or part of its mandatory contribution – to a special body: an approved employer-employee collecting organisation (organisme paritaire collecteur agréé - OPCA), which has authority at the trade or professional segment level. There also exist OPCAs with interprofessional powers.(see 10.4)

**COMPANY TRAINING PLANS**

Establishing a training plan is one way in which employers may fulfil their legal obligations. The training plan may be made up of all training and skills surveys conducted for employees (with the exception of Individual Training Leave) in order to further the company's own development objectives. These training programs are provided under the employer's authority and at the employer's expense (maintaining salaries, training costs, etc.). Training provided as part of company training plans tends to be short-term (40 hours on average) and does not tend to result in the employee obtaining formal qualifications.

An employee taking part in training under the training plan is considered “on assignment”, since training is seen as one way of executing a work contract. Therefore, the employee continues to receive remuneration throughout the duration of the time spent in training.

Over the last ten years, initiatives launched to enhance workers’ skills foresee that training may, under certain conditions, take place during non-working hours. This system was reaffirmed by the national interprofessional agreement reached by the social partners on 5th December 2003.
It provided that this time (training during the non-working hours) does not exceed 80 hours per year and per employee. In this situation, the employer must pay the employee participating in training a subsidy that shall be equal to 50% of his net salary.

Since the Law of 24th November 2009 the training plan includes two categories training courses instead of three.

- The actions concerning the adaptation of the employee in his function, the evolution or to the preservation in the employment in the company
- The actions concerning development of his skills

**INDIVIDUAL TRAINING LEAVE**

The labour code organise the Individual Training Leave program (CIF - congé individuel de formation) for the employees with a certain level of seniority in their company or professional branch (they have to prove a working duration of 24 months as an employee). The length of leave taken corresponds to the length of the training program and is legally limited to one year for continuing training or to 1,200 hours for periodic training schedules. Except in particular cases provided by the law, an employer cannot refuse an employee's request for training as part of the Individual Training Leave program. The state approved joint collecting organisations (OPCA) are responsible for the implementation and funding of this program. During the CIF the employee may receive an allowance which is paid by the employer who obtains the refund by the OPCA. There are particular clauses governing the use of Individual Training Leave by employees with temporary employment contracts and for temporary workers.

Training programs under the Individual Training Leave are most often long programs resulting in formal qualifications (754 hours on average in 2007), which contrasts sharply with training carried out as part of company training plans.

In 2009, concerning CIF, out of 69 905 requests for financing CIF recorded in 2008, 59 965 have reached a final decision and 68% of them have been accepted.

In 2009, the number of CIF financed declined slightly (-3.6% compared to 2008) to reach 39 428 people.

But number of CIF-CDD (contrat à durée déterminée - fixed-term contract) continued to increase, reaching 11,218 people.

**Source: Budget Plan for 2011-Ministry of Employment**

The 24th November 2009 law related to guidance and lifelong vocational training gives the opportunity to an employee to follow a CIF outside of working hours. Its goal is to expand the access of employees to training initiated by themselves. The OPCA can finance the training but in this case there is no allowance.

**INDIVIDUAL TRAINING RIGHT BENEFIT**

Set up by the social partners’ agreement on 5th December 2003, and ratified by the law of 4th May 2004, Individual training right (droit individuel à la formation - DIF) is based on employee's initiative and negotiated with his or her employer except in case of working contract breaking off.

Any working employee holding an open-term contract shall be entitled to 20 hours of training per year (or 120 hours over a six-year period) to take part in training as described in the
enterprise’s training plan and even if he already has participated in training as part of company plan. Employees holding a fixed-term contract may be eligible for this plan, under certain conditions.

Employees under a limited-time contract can also benefit from this right under specific conditions.

In all companies, whatever its size is, DIF is more and more used: 21.2% of the companies resorted to it in year 2008 against 18.1% in 2007. The access rates have been raised moderately from 5.1% to 5.7%. The average duration of training in the framework of the DIF remains stable around 20 hours whereas the hours capitalized are more and more increased.

In 2009, more employees benefited from DIF than in previous years.

The access rates for employees have been raised moderately (6.2% in 2009, 6% in 2008, 5% in 2007 and 3% in 2006). Nevertheless, the access rate for DIF remains relatively low.

In 2009, the OPCA financed 504 330 DIF trainees, 34% more than in 2008. Among the people involved in this training: 51% are men, 64% are aged 35-45 years old and 32% more 45 years old, 57% are employees or supervisors. The proportion of engineers and managers (22%) declines for the benefit of the workers (20%). The DIF has been financed mainly by the OPCA in the framework of a DIF priority (54%) and training plan for firms (32%).

In 2009, the average duration of the training funded by the DIF OPCA, is 24 hours per trainee (22h in 2008). It usually takes place on the working-time (59.5%), however, the training outside working hours has recorded an increase from 28% in 2008 to 31% in 2009.

ACCESS TO TRAINING FOR PUBLIC-SECTOR EMPLOYEES

Training is set up for civil servants at the national and local levels through a policy agreed upon by all of the parties involved, including the administration and employee representatives.

The training programmes can be initiated either by the employer or by the employees. Public sector employers can organise a training plan and employees can obtain a “congé professionnel” (professional leave is quite similar from CIF). The system of CVT for public sector employees have been reformed by two laws in 2006 (laws of “modernisation de la fonction publique” of February 2nd, 2007 and of February 19th 2007 “relative à la fonction publique territoriale”).

Changes consist in:

− introducing the training plans, established at the administration initiative;
− introducing the individual training right (droit individual à la formation – DIF): Any working employee holding an open-term contract shall be entitled to 20 hours of training per year (or 120 hours over a six-year period) to take part in training. Training can be followed outside working hours;
− Introducing the validation of prior learning. Any person can have experience acquired over a period of at least three years validated.

Like private-sector enterprises, the administration, the local governments and the public establishments are required to pay a contribution to fund training for their civil servants.
Special organisations are in charge of collecting the funds, in certain cases: this is true with civil service at the local level (towns, regions and departments) and civil servants working in hospitals.

As concerns State civil servants, the rate of contribution is negotiated between the Ministry for Civil Service and the trade organisations that exist within that sector. A three-year framework agreement establishes the minimum contribution thresholds applicable to each administrative department, under the training plan and the training leave system.

We notice that participation rate in formal education and training in France is less important than in Europe, on average and according ISCED.

**6.2 Non-Formal Education**

In France there is no specific program related to non-formal education. Prescribers training are the same: state, regions, employment centre, and business. They have the ability to schedule non-formal training, but they will not be identified as such and there is no specific statistic to separate the skill training from non-qualifying. The status of a probationer does not depend on formal or non formal.

Nevertheless, France created 2 systems for accrediting and validating non-formal/informal learning (Validation des acquis de l’expérience –VAE).

The first one is to obtain an access to high education (validation of prior learning) and the second one to obtain totally or partially a diploma.

The law of 22 July 1992 on validation of professional experience introduced a system of dispensations for credits leading to qualifications where such are awarded by the Education and Agriculture Ministries. These conditions have been extended to cover all certifications recognised at national level and included in the RNCP (répertoire national des certifications professionnelles - National Directory of professional certifications).

The social modernisation law of 17 January 2002, states that any person with a least three years’ paid or voluntary experience may be granted part or all of a professional certification from the national certifications directory (diplomas, degrees or certificates) on the basis of his/her experience.
Under this system, each individual can ask to have his previous experience recognised. Any person taking part in the active world – whether a jobseeker, an employee or a volunteer worker – can have experience acquired over a period of at least three years validated, in order to gain partial or full exemption from coursework required for a diploma, certification or qualification certificate awarded by a professional branch. This qualification method carries the same dignity and weight as do traditional schooling or university studies, apprenticeships or CVET.

This competency-evaluation procedure is organised by the authorities, ministries or other bodies with responsibility for awarding certifications. The evaluation may be conducted based on the contents of the application or on a real or simulated work situation. The validation is decided by a board composed of teachers and professionals.

For secondary-level qualifications, dispensations or examination postponements are authorised by Ministries, which, in the regions, are responsible for organising examinations.

Concerning higher education, individual universities examine candidates’ entry applications.

In 2009, the number of candidates increased by 7 points (57,000 in 2009 compared to 53,000 in 2008). Since 2002, 168,000 candidates have been certified thanks to the VAE. After an increase phase until 2005 (+65% of certified candidates between 2003 and 2004 + 28% between 2004 and 2005) it increases slowly with a slight rebound in 2009 (32,000 VAE certification in 2009, 10% more than in 2008). They were 15% more between 2005 and 2006, over 16% between 2006 and 2007 and 3% from 2007 to 2008.

The skills audit (BDC – Bilan de compétences) can help employees and job-seekers looking to define their career or training development plan. The skills audit allows the persons to define a professional project and, if necessary, a project of training. To reach this purpose, the implemented actions of skills audit aim to analyze the professional and personal skills of the person as well as his capacities and motivations.

In 2007, 194 000 skills audit were realized among which 32.5 % (63 000) by the network of the CIBC (Centre Interinstitutionnel de Bilan de Compétences - inter-institutional skills audit centres).

Sources: Dares, Premières synthèses - October, 09, n°40-4.

Both of these measures (VAE and Bilan de compétences – BDC) can be implementing by the employee (leave) or by the employer (training plan).

The leave represents a discontinuous period of 24 hours during which the employee realizes the audit or prepare the file of his demand of VAE. During this period, the employee receive an allowance from the OPCA.

Beneficiaries of a skills audit are mainly employees (more than 50%). They are between 25 and 44 years old (78%). Women account for 67% of these people. Over 70% of the skills audit are followed outside working time. Financial assistance for a skills audit amounts to 1428 euros (-13%) for a person on a permanent contract and 1569 euros for a person on a fixed-term contract.

6.3 Language learning in CVET

The European Language Portfolio (ELP) (Portfolio européen des langues (PEL))

It is a document in which any language learner can record his language skills and cultural experiences. It contains a language passport regularly updated by the learner. A grid is used to define language skills in accordance with criteria recognized in all European countries and thus to complete school certificates.

The Europass Language Passport is an electronic version of the standard Language Passport for adults. It was developed conjointly by the Council of Europe and the European Union. It can be filled in online or downloaded.

Models of portfolios differ according to countries and educational contexts. Source: [http://www.coe.int/t/dg4/linguistic/Portfolio_FR.asp](http://www.coe.int/t/dg4/linguistic/Portfolio_FR.asp)

In 2010, 6457 Language Passport have been filled up online from the site of CEDEFOP.

The diploma of language skills diplome de compétences en langues –DCL

It is a degree accredited by the Ministry of Education adapted to the professionals’ needs. The DCL demonstrates operational communication skills in foreign languages. The notion of communication language for professional use (langue de communication à usage professionnel LCUP), has been defined concerning all sectors and all functions. It underlines the personal and professional experience in the prospect of European mobility.

Since January 2011, it applies to the following languages: German, English, Arabic, Breton, Chinese, Spanish, Italian, French, sign language, Occitan, Portuguese, Russian, and French as a Foreign Language. This diploma have several degrees mentioning the equivalence with the levels of Common European Framework of Reference for Languages. Source : [http://www.d-c-l.net/](http://www.d-c-l.net/)

Certificate of language skills - Certificat de Compétences en Langues - Le CLES

Certificate of language skills of Higher Education is an accredited certification by the Ministry of Education created by a decree and linked to the Common European Framework of Reference for Languages (Cadre Européen Commun de Référence pour les Langues (CECRL)). It evaluates the operational communication skills for students in several languages.

The CLES is currently available in 9 languages: English, German, Spanish, Portuguese, Italian, Arabic, Polish, Modern Greek and Russian. It will be gradually enriched with new languages. The CLES evaluates five skills: listening, reading, writing, expression, oral expression and oral interaction.

The CLES concerns initial training, particularly higher education.

Source : Decree of May 22, 2000
Source : [http://www.certification-cles.fr](http://www.certification-cles.fr)
The TOEIC (TEST OF ENGLISH FOR INTERNATIONAL COMMUNICATION)
This test enables any individual to evaluate his professional English level. It is required for recruitment by many companies in various fields and in many schools and universities.

THE TOEFL (Test of English as a Foreign Language and Test of English as a Foreign Language - Test d'anglais langue étrangère).
It is a standardized and for fee test. It designed to assess the ability to use and understand English in an academic setting for non English native people. It is comparable to other standardized tests in English, such as TOEIC or IELTS.
This test is particulary used by universities for admission of foreign students.

Language policies for adult migrants
Several countries require from adult migrants a proof of proficiency in the language of the host country to grant them the right to residence, a work permit or citizenship. The skill level required is generally based on the Common European Framework of Reference for Languages (CEFR) defined by the Council of Europe. A language test may be required. In France, the host contract and integration (CAI) for a period of one year, allows the recipient to follow certain civic and language training and to have a skills audit. (see 6.3.4)

6.4 Measures To Help Job-Seekers And People Vulnerable To Exclusion From The Labour Market
In order to facilitate access to training for the unemployed people, different measures have been set put by the state and regional council.

The program core competencies (programme competences-clés)
The rate of the illiterate people is estimated at about 9% by INSEE (3.1 million people, 57% are employed).
Key skills (including comprehension and written expression, basic skills in mathematics and science, the use of information technology and communication, and the ability to develop knowledge and skills on their own) are important for sustainable integration.
Thus, the law of 2009, following the recommendation of the European Parliament and Council No. 2006/962/EC of 18 December 2006 on key competences for education and training throughout life, provides that vocational training throughout life enables to develop and update knowledge and skills which develop and complete the common set of core skills and promote professional development.
The Ministry of Employment in 2009 has open up these arrangements in order to reduce illiteracy, to support individualised pedagogy and introduction for the use of Internet. He replaced them with the key skills program, basic skills training, the dates, duration, pace and content are customized according to employability project, expectations and needs of each learner. This training is for job seekers, unemployed youth, employees in assisted contract (with conditions) and employees who don’t want to speak about their illiteracy to their employer. Effective partnerships are established with National Body for Employment (Pole Emploi), Missions locales (local bodies for social inclusion of young people) and Cap emploi (local bodies for the vocational inclusion of deasabled people).
In 2009, more than 31 000 learners actually have been trained (more than 68% are women),
That corresponds to an expenditure of 37.8 M euros.

The budget bill for 2011 plans to increase resources for key skills training (54.3 M euros),
which will concern more than 40 000 learners.

Source : Budget Plan for 2011-Ministry of Employment

6.4.1 Measures for all the unemployment people

- The allowances

Job seekers receiving receiving ARE (allocation d'aide au retour à l'emploi - back-to-work allocation) may participate in training programs and continue to receive benefits within the limits of the law.

Industrial partners run the office that manages unemployment insurance funds (Pôle emploi), which is in charge of managing and distributing unemployment benefits.

Furthermore, job seekers facing difficulties related to retraining for a new occupation may conduct an in-depth skills survey in order to better focus their professional goals and establish a strategy for re-entering the workforce.

The job seeker who is required training by Pôle emploi is entitled to use the ARE Training or AREF (allocation d'aide au retour à l'emploi-formation - allocation for returning to employment-training) the training aid. The gross amount of the allowance is equivalent to the amount of the ARE paid to the person seeking employment. Pôle emploi may prescribe any training relevant to the determined reclassification. However, only certain courses are eligible for training aid.

The number of first entries in AREF during the year 2008 amounted to almost 191 285, with an increase of 3.9 % compared to the 8.6% raise in 2007.

Finally, if the person does not fill the conditions of perception of AREF, the person can maybe claim to the payment training of National Body for Employment (Pole Emploi), (Rémunération Formation de Pôle Emploi RFPE) in certain specific situations

In 2009, 901 million financed the AREF (allocation d'aide au retour à l'emploi-formation - allocation for returning to employment-training)

The actions of Pole emploi for the development of skills of job seekers (financing of operations and earnings of trainees) represent an expenditure of euros 374.3 million in 2009, budget of Pôle emploi (UNEDIC contributes).

Source : Budget Plan for 2011-Ministry of Employment

- The accompaniment measures towards the employment

The POE (Préparation opérationnel à l'emploi - Operational preparation for employment) allows job seekers to acquire the skills needed to respond to obtain a job. It has been introduced by the Law of 24 November 2009 and managed by for July 2010. (Please see 6.1.2)

In addition, jobseekers can also request an "In-depth skills audit" (Bilan de competences Approfondi - BCAs). The audit is intended to help jobseekers to refocus their vocational plan and define a new pathway for their return to employment.

The BCA is suggested by Pôle Emploi through the personal project to acces to job (Projet Personnalisé d’Accès à l’Emploi – PPAE). In order to accompany the return back to employment, every job seeker is required to participate to a PPAE, provides by National Body for Employment (Pole Emploi).
The specific work contracts

Contrat de Transition Professionnelle – CTP (contrat de transition professionnelle - professional transition contract see § 3.2.3), CRP (convention de reclassement personnalisé - personalized placement agreement see § 3.2.3), CUI (Contrat unique d’insertion – unique contract of social inclusion).

Moreover, the unique contract of social inclusion (Contrat Unique d’Insertion – CUI) is set up since January 1st, 2010. It includes all the former assisted contracts which existed up to now and repealed by the CUI. The contracts of insertion-undeclared income minimum of activity (Contrat d’insertion – Revenu minimum d’activité - CI-RMA) and the contract of future (Contrat d’avenir - CAV) were repealed by the law of December 1st, 2008.

Six months after the payment of the aid linked to their contract, employees after following a subsidized contract in the market sector in 2008 are more often employed than the ones having contract in non-market sector: 74% and 58% people in CIE and CI-RMA, compared to 47% and 31% for people in CAE and CAV.

In 2008 the leavers are slightly less often employed than those of 2007, except in the case of CI-RMA. This lower rate of access to employment is still rather limited compared to the deterioration in labor market in mid-2008. In addition, the rate of access to sustainable employment increased slightly, except at the end of CIE.

Having trained in a contract or having been accompanied by a tutor with the employer increases the chances of employment after the end of the contract.

Source: The professional integration of people helped out of contract in 2008: access to employment relatively unaffected by the economic downturn - Yannick Fendrich DARES Analyses, No. 078, November 2010, p. 12 - ISSN 2109-4128

The Employer groupings for integrating and qualification (Groupements d’employeurs pour l’insertion et la qualification - GEIQ) play a major role in re-integrating jobseekers on the job market. GEIQ is a grouping of employers intended to help mainstream and secure qualifications for disadvantaged people, through a pathway based on a work contract based on alternating job-study training programmes.

6.4.2. Measures for Fixed term contract employees

Employees working under a fixed-term contract enjoy an individual entitlement to vocational training, in the form of (Congé individual de formation -individual training leave - 6.1.2) and/or skills review leave (CBC – 6.2). Similar rights exist for temporary workers. This right is usually exercised when a work relationship ceases.

6.4.3. Measures for disabled people

Law No. 2005-102, dated 5th February 2005 on the equality of rights and chances, on the participation and the citizenship of the disabled people, recognises that "it is the State’s duty" to provide education, training and vocational guidance for minors and adults with sensory, physical or mental handicaps. Although vocational training for the handicapped must be carried out, in large part, in specialised establishments, it can also be offered in regular working or training settings as well.

The disabled people have access to all employee training programs (company training plans, CIF - Congé individual de formation -individual training leave)) and programs for job seekers (internships and assisted employment contracts).
Nevertheless, in order to compensate for the disadvantage this population faces in terms of social and professional integration, public authorities have implemented specific training-related measures (professional rehabilitation programs, professional rehabilitation contracts, etc.).

Benefits from the Fund Management Association for the Professional Integration of disabled Persons (association pour la gestion de l’emploi, de la formation et de l’insertion des personnes handicapées - AGEFIPH), which runs back-to-work and professional support programs for the handicapped, may be received in addition to state benefits.

The unemployment rate of disabled people reached 19.3% in 2007, an increase of almost 3 percent from 2002. The low-skill job seekers with disabilities is the main obstacle to their access and their continued employment: Among this band of people, 81% is indeed a skill at a level equal to or below the BEP (Brevet d'Etudes Professionnelles - Professional Studies Certificate). Facilitate access to vocational training and qualification is therefore a lever for action to effectively fight against unemployment of the public.

Source : Budget Plan for 2011-Ministry of Employment
Employment and Unemployment Survey of Disability, conducted by DARES and INSEE

Benefits from the AGEFIPH (Association pour la gestion de l’emploi, de la formation et de l’insertion des personnes handicapées - Association for the Professional Integration of disabled Persons), which runs back-to-work and professional support programs for the handicapped, may be received in addition to state benefits.

The Fund for the Integration of Persons with Disabilities in the Civil Service _ FIPHFP - Fonds pour l'Insertion des Personnes Handicapées dans la Fonction Publique

Concerning the public sector, access to employment for all people with disabilities is a priority of Fund for the Integration of Persons with Disabilities in the Civil Service (Fonds pour l’Insertion des Personnes Handicapées dans la Fonction Publique FIPHFP). The Fund provides fundings to communities that are willing to improve the accessibility of their desktops to all types of disabilities.

6.4.4. Measures for immigrants

Legal immigrants also have access to all training programs open to workers with French nationality. In addition to benefits available to all, French Office of the immigration and the integration (Ofii - Office Français de l'Immigration et de l'Intégration - The French Office of the immigration and the integration) provides a part of the linguistic training initiatives taken in charge previously by ANAEM (Agence nationale de l'accueil des étrangers et des migrations - Agency for immigration and welcoming foreigner people). (see § 1.2)

The Contract of reception and integration (CAI Le contrat d'accueil et d'intégration).

A person admitted for the first time in France and wishing to stay permanently, receives benefits of reception and integration supported by the French state. Such benefits are provided within the framework of a contract called "contract of welcome and integration" signed by the foreign person and the state. This contract is for one year. It enables the recipient to follow certain civic and linguistic training and to benefit from a skills audit.

Source : OFII
6.4.5. Measures for other target groups

The other target groups are:

**Illiterates** - 3.1 million people aged from 18 to 65 are concerned by illiteracy, more than a half (1,700,000 people) are in employment.

Actions in the fight against illiteracy The "fight against illiteracy" of the program IRILL (Insert, reintegration and the fight against illiteracy) involved approximately 22,000 people in 2008. The audience is predominantly female recipient (63%). Those under 25 years old represent 31% of trainees. The majority of them are unemployed (65%).

The ANLCI (Agence nationale de lutte contre l’illétrisme - National Agency fighting against illiteracy) exists since 2000 and is responsible for promoting all actions relevant to measure, prevent and act against illiteracy and to promote access for all to reading, as well as the writing and basic skills. It provides a repository of key skills in a professional situation with a user guide. It promotes the federation and the optimization of resources mobilized by the state, local governments, businesses and civil society in the fight against illiteracy. It supports and assists the actors who carry out actions of prevention and fight against illiteracy. It provides a space for all internet.

*Source: ANLCI (Agence nationale de lutte contre l’illétrisme - National Agency fighting against illiteracy)*

**Inmates.** The programs are on line with a logic of building a training pathway according the experience, the acquired knowledge and the needs. Most of the people have no diploma, 26% of them have difficulties to read (these figures are based on the illiteracy tests filled in when entering into jail), 16% of them are illiterate. In 2008, training programs implemented has enabled 12,000 inmates to follow a course, they were 10,300 in 2007. Only 11% of trainees are women and 27% of them are under 25.

With funding from the European Social Fund, State, Regional Councils and national agency for the social cohesion and the equality of opportunity (Agence nationale pour la cohesion sociale et l’égalité des chances _ACSE_)

In 2009, 20,455 prison inmates benefited from training. Près de la moitié d’entre elles avait moins de 26 ans. La population féminine en formation professionnelle est de 7 %, alors que les femmes représentent seulement 3 % des personnes détenues.

Les actions de pré-qualification (49,8 %), de remise à niveau (15,3 %) et de développement des compétences fondamentales (8,8 %) représentent une part importante de la formation professionnelle dans les établissements pénitentiaires. Un pourcentage important de personnes détenues sans qualification (près de 60 %), 20 % des formations dispensées débouchent sur une qualification ou un titre du ministère chargé de l’emploi.

*Source: Budget Plan for 2011 –Ministry of Employment*

In 2009, 20,455 prison inmates benefited from training. Almost half of them were under 26 years old. Women in vocational training account for 7%, while women represents only 3% of prison inmates. The actions of pre-qualification (49.8%), upgrading (15.3%) and development of basic skills (8.8%) are an important part of vocational training in prisons. There is a large percentage of inmates with no qualifications (around 60%), 20% of training courses lead to a qualification or title Ministry for Employment.

*Source: Budget Plan for 2011 –Ministry of Employment*
In 2008, 21,972 prison inmates were enrolled in vocational training. 59% followed pre-qualifying and qualifying actions, 32% basic training (training against illiteracy, French language ...) and course in general education and 9% of courses preparation for release or job searching.

People with no qualification or with insufficient qualification: the programs of access to key competences according European terms can be financed either by Regional Councils or by State Government and sometimes is co-financed by both in partnership with the National Agency fighting against illiteracy (ANLCl (Agence nationale de lutte contre l’illétrisme - National Agency fighting against illiteracy): www.anlci.gouv.fr)

**Young jobseekers aged 16 to 25 years old** with difficulty in finding a job, because of low skills levels or poorly suited qualifications, sign a special work contract including training. This may be either an apprenticeship contract, or a professionalisation contract.

---

Schools of second chance – Ecoles de la 2ème chance E2C

The E2C concept is in line with the principles presented in 1995 in the white book of the European Commission: "Fighting against exclusion by investing in intelligence and enable individual to build his own qualification".

E2C propose to young people tailored training pathways aiming at bringing to standard the general competences, particularly according to the general terms of the base of knowledge and skills, and the implementation of a vocational project from alternance training in company.

Bearing in mind a reinforced partnership with Regions, by 2010, the government would like to propose to 12 000 people insufficiently qualified their entry into E2C. In order to reach this objective, the State Government commits itself to be a partner of this network schools: the government will take part in funding at the same level as the regional collectivities, that is to say up to one third.
7. Training VET Teachers and Trainers

7.1 Types Of Teacher And Trainer Occupations In VET

7.1.1 Teaching and Training Occupations In VET

Various types of teachers and trainers correspond to the various streams and systems of the French vocational training system, and their recruitment, training and career paths differ according to the relevant activity.

The terminology applicable to the French context is:

- The teacher (or lecturer) is an educator working in the formal education system: the school (primary and secondary school) and university environment, whatever the level of teaching concerned.

- The trainer. There are several usual expressions to denominate trainers "casual trainers, speakers, presenters" which can correspond to a secondary or unique activity.

- The apprentice master is an employee directly responsible for training a young apprentice within the company. In relation with the CFA (Centre de Formation d’Apprentis Apprenticeship Training Centre), the apprentice master’s mission is to contribute to the acquisition by the apprentice of skills corresponding to the qualification and to the diploma.

- The tutor is an employee responsible for training a new employee, especially those who are beneficiaries of special work contract within the company. The tutor is not compulsory to accompany the employees in a period of professionalization. It is sometimes useful and necessary. Grants of Opca are planned for companies.

NB: The apprenticeship is a part of initial training or education, but the apprentice signed also a work contract depending on the labour code. For these reasons, the regulation and fundings (including apprentice’s master) depend partly on Ivet and partly on Cvet. In the opposite the tutor only depends on the Cvet.

7.1.2 Responsible Bodies

The Ministry of national education is responsible of the teachers in IVET. The Ministry finances initial and continuing training.

The ministry in charge of employment is responsible of regulating of teachers and tutors professions in CVET. But the market is free, so each training provider defines its own regulations for initial and continuing training of its teachers and facilitators.

The 2009 reform does not define precisely the rules regarding the minimum training level necessary for the professionals of this branch because of the overdiversification of training professions. Thanks to the law, more transparency for the beneficiaries (private individuals and companies) becomes possible. Therefore, the program, the training objectives and a trainers’ list mentioning their respective diplomas must be conveyed to the trainees before the registration to a training.
Each training centre is free to define the rules regarding training policy of their trainers. Nevertheless, frames of skills’references exist. Defined by the collective agreement of private centres, they enable to split up the competences regarding trainers’professions into 3 sets: the educational process, the environment and the delegations granted to trainers.

7.1.3 RECENT REFORMS TO VET TEACHER/TRAINER TRAINING

None

7.2 Types Of Teachers And Trainers In IVET

7.2.1 TYPES OF TEACHERS, TRAINERS AND TRAINING FACILITATORS IN IVET

TEACHERS AND TRAINERS IN SCHOOL-BASED IVET

For the most part (90%), teachers are civil servants, and their status and rank is determined by national entrance examinations for admission to the profession and regulated by the state. Teachers then teach the same discipline throughout their career. There are two categories of teachers:

– Teachers in mainstream education. Their entrance examination is based on academic knowledge in a particular discipline (such as history, mathematics, French, etc.);

– Teachers in vocational and technical education. Their entrance examination is based on their professional knowledge and on previous professional experience in the relevant trade (accounting, hotel management, cabinet-making, etc.).

TEACHERS AND TRAINERS IN APPRENTICESHIP

Teachers are often ex-tradesmen and tradeswomen, experts in the field they are teaching (baker, engineer), they may be employed on a contract (full- or part-time) in the Apprentice Training Centre, or they may be self-employed.

They must have a certificate of “non-opposition to teaching”, issued by a national apprenticeship inspector.

The apprentice master is an employee directly responsible for practical training of the apprentice within the company. (see 7.1)

The regions are responsible for apprenticeship and they establish and fund teacher training programmes for Apprentice Training Centres, especially in relation to the management of placements in the workplace. These training plans are developed at the regional level, and vary from region to region, depending on the objectives and priorities determined by the regions.
7.2.2 Pre-service and in-service training of IVET teachers and trainers

Initial training

- Teachers

Most teachers are trained in the IUFM (Institut universitaire pour la formation des maîtres - University Teacher Training Institutes), as well as by distance learning (CNED) or in one of the four ‘écoles normales supérieures’ (ENS) or in certain universities or private institutions.

The minimum level of qualification required before taking the vocational and technical education entrance examination is Bac + 5 (admission criteria to IUFM - Institut universitaire pour la formation des maîtres - University Teacher Training Institutes). A university doctorate is the equivalent of Bac + 8, and is sufficient for teaching at a University.

Since 2010, it is necessary to reach a Master's degree (Bac + 5) or to be registered in second year of Master's degree (M2) to teach or to insure educational functions. From the second year of license, some University propose modules of raising awareness and pre-professionalization or courses intended for the jobs by the education.

For the Ministry of education, teachers in initial training are:

- Primary schools teachers (pre-elementary and elementary schools)
- The professors of the second degree who teach either in junior high schools and senior high schools (undergraduate), or in the technological high schools, or in the apprenticeship training center;
- The provisors

It exists specific for every category of staffs (Aggregation, CAPES, CAPEPS, CAPET, CAPLP, CPE).

Training at IUFM (Institut universitaire pour la formation des maîtres - University Teacher Training Institutes) may last two years: The first year covers preparation for the external or internal recruitment examination, with admission based on case file and interview.

If successful in the examination, the second year covers, alternately, professional, theoretical and practical training, at the end of which the student teacher receives a certificate and becomes a civil servant.

- Trainers

There are few trainers who have initial training (scarcely 10%) and they are mainly selected on the basis of specific qualifications that are suffering from a shortage of qualified teachers.

Professionals are therefore contracted in areas such as accounting or civil engineering, as well as in the arts, applied arts and design.

Very often they come directly from their area of activity, with no prior trainer training before they take up their posts.

From September 1st 2012, to be appointed probationary officials the news teachers will have to justify:
The status of “apprentice master” is not governed by law, and no specific training or qualification process is required (including the title of “confirmed apprentice master” created in 1997). It is a function performed by the employer (in a very small company), which is secondary to his/her usual occupation, or else by an employee appointed by the employer. The apprentice master is chosen from volunteers among the qualified employees, according to their diplomas, professional experience, and a level of qualification at least equivalent to that for which the apprentice is being prepared. He/she is directly responsible for the apprentice’s training, and provides a link to the apprentice training centre. He/she must be at least 18 years old, and must provide full character references.

The title of “confirmed apprentice master”

The exercise of the function of apprentice master is not subordinated to the title of “confirmed apprentice master”.

This title recognise the investment of “confirmed apprentice master” in the supervision and the training of the apprentices.

This title is attributed, on certain conditions, by chambers of agriculture, chambers of commerce and industry and professional associations, after conclusion of an agreement with the State.

CONTINUING TRAINING

The mission of IUFM (Institut universitaire pour la formation des maitres - University Teacher Training Institutes) is threefold:

- They prepare to the complementary certificates necessary to intercede with disabled students;
- They organise training of teachers and trainers;
- They take part to the training offer related to teachers and trainers.

Henceforth integrated as internal schools of universities, IUFM (Institut universitaire pour la formation des maitres - University Teacher Training Institutes) work with universities on the new plans of the studies modified by the reform.

Source: http://www.iufm.education.fr/devenir-ens/formation.html
IN SERVICE CONTINUING TRAINING FOR TEACHERS RELATES TO ACADEMIC SKILLS

The in-service training of teachers can take part in “Summer Universities” (one or two week seminars) arranged at national level by the Ministry and in training courses organised in each academy by the IUFMs (University Teacher Training Institutes). Since 1998, the IUFMs who have signed a contract of agreed objectives with the rector organise the continuing training of teachers, by means of internships of specific sessions, 5 days a year throughout their time in service.

It is possible to take a sabbatical for training, but this is rarely used.

7.3 Types Of Teachers And Trainers In CVET

7.3.1 TYPES OF TEACHERS, TRAINERS AND TRAINING FACILITATORS IN CVET

The trainer is a professional engaged in vocational training activities, inside or outside the company and, in general, in the private training market. More precisely, he/she is an educator of adults.

Other players are involved in the training process: consultants, training managers in training centres or within a company, tutors within a company, and other “facilitators”. Their status is not covered by the regulations, and is primarily a question of private law.

There is no national regulation governing the status of trainers or other training professionals. A large majority of trainers are private contractors, working full- or part-time. They are selected on the basis of their qualifications and/or skills and professional experience in a particular sector.

The environment of training organizations is characterized since many years, by profound changes: more individualized training, a new relationship to knowledge, enhancing security in employment, rationalization of the process ...

In 1998 a framework of activity was divided into four professional categories: animation training devices, training design and instructional design, promotion - sales and marketing, management and managing of an organization.

Following the 20110 study, two new families have been added to this framework: counseling and coaching, administrative management - logistics - financial and regulatory body.

TUTORS IN THE WORKPLACE (PROFESSIONALIZATION CONTRACTS)

The function of tutor does not have any equivalent in law, and requires no training or qualification. It is a function carried out by an employee appointed by the employer that is secondary to his/her usual occupation. The tutor is chosen from volunteers among the qualified employees, according to their diplomas, professional experience and a level of qualification at least equivalent to that for which the new employee is being prepared.
The mission’s tutor is to welcome, to help, to inform and to guide the beneficiary of the professionalization contract, during the duration of this contract. He insures the connection with the training service, implements the actions of professionalization and participates in the evaluation and the follow-up of the professionalization.

The employer allows him to have time to fulfill his functions.

Tutor wasn’t compulsory to accompany the employees in a “professionalization contract”. It is often useful and necessary. Grants of Opca are planned for companies. (see 7.3.2)

Since 2011, the tutoring is mandatory for professionalization contracts. A national intersectoral agreement on support for young people aims to further facilitate their stability in employment. Besides, it strengthens the role of the tutor aiming to increase the quality and effectiveness of actions undertaken within the framework of vocational training schemes. It establishes the mandatory setting up for any recruitment of a professional contract tutoring (which can be organized in the form of tutoring team).

Source: the ANI (Accord national interprofessionnel - National Interprofessional Agreement) of 11 July 2011 on youth employment

The telecommunications industry makes tutoring mandatory for devices professionalization. Thus, the joint body authorized collector for Telecommunications Avicim created for its members an information portal called mentoring Space Guardian: a knowledge base is intended for all guardians of the branch containing various forms of information and tools direct access or through themed awareness.

7.3.2 Pre-service and in-service training of CVET teachers and trainers

Trainer is the generic term for anyone involved in continuing training. Many of them do not have a specific teacher/trainer diploma.

The trainer is a teacher who operates in the field of continuing training. He/she trains young people and adults who have left the school or university system, in a training centre or in the workplace. There are very few trainers who only work with young people: the relevant centres tend to mix the user groups for training, and bring people together according to their level of training rather than their age.

Many of them work as casual trainers in companies or training centers on the basis of the expertise they are able to provide due to their principal activity.

Initial training

- Trainer

Since there is no specific status for the trainer except for that provided by the AFPA, (Association for adults vocational training, the main operator of the French ministry in charge of employment), there is no specific initial training for trainers in continuing training. Bodies or enterprises who employ them, may nonetheless arrange specific training.

For example, AFPA arranges basic 4 to 12 week modules, for all its trainers, to enable them to learn to teach their own subject area, using reference bases.

The major private training networks, profit- or non-profit making, also have an internal training facility that aims to provide both familiarity with the culture of the institution as well the attainment of specific skills.
Tutor

No specific training or qualification is required. However, given the vital role played by tutors in the quality of alternating training, the public authorities strongly encourage employers to send tutors for training: tutor training can then be financed by joint collecting bodies, up to a limit of 40 hours. This training mainly consists of providing an understanding of the regulations governing alternating training, and providing the basis for the development of a training programme and its evaluation.

The 24th November 2009 law fosters developing tutoring. It authorizes the financing in the companies of a part of the tutor wage, from the funding of continuing training (particularly from the training plan).

Moreover, 3 times a year, the collective bargaining in each branch must include tutoring developing and enhancing tutor role, particularly in the case of employees over 55.

**CONTINUING TRAINING**

It is difficult to provide a national overview of the continuing training available for trainers: the major institutions that dispose of a national trainers’ network (Education and Agriculture ministries, the AFPA, Chambers of Commerce and Industry and Chambers of Trade, private education federations, large companies, private adult training networks) fund a national programme for training of trainers for their own staff. These programmes involve only the staff of these institutions. They are often supplemented by training courses organised at the regional level, for adaptation or development of trainers according to local needs.
8. MATCHING VET PROVISION WITH LABOUR MARKET NEEDS

8.1 Systems And Mechanisms For The Anticipation Of Skill Needs (In Sectors, Occupations, Education Level)

Various programs are implemented by the State for anticipation of skill needs.

DEVELOPMENT COMMITMENTS OF EMPLOYMENT AND SKILLS (EDEC - ENGAGEMENTS DE DÉVELOPPEMENT DE L’EMPLOI ET DES COMPÉTENCES)

The employment-contract policy expertise is a key tool of the employment policy of the state and aims to anticipate and support the consequences of economic, social and demographic information on employment and skills. It was renewed in 2006 with the creation of EDEC - engagements de développement de l’emploi et des compétences (development commitments of employment and skills).

The EDEC spend the contractual nature of this public policy based on dialogue with social partners (trade associations and unions of employees).

The EDEC constitute thereby one of the incentive schemes available from the State to assist industries and enterprises (especially SMEs) to engage in efforts to anticipate change and prevention of risks of inadequate staff to use. The professional or interprofessional organizations can implement with the State, in a contractual frame, the EDEC to anticipate and accompany these evolutions.

The EDEC support the development of skills in firms and industries and help structure the social partners' initiatives in this area.

Established on the social dialog and the partnership, EDEC bases on two additional dimensions:
- the first one covering the contracts of prospective studies (CEP - Contrats d'études prospectives - contracts Prospective Studies)
- the second one covering the deployment of the action (les Actions de développement de l’emploi et des compétences - ADEC)

THE CEP (CONTRATS D'ÉTUDES PROSPECTIVES - CONTRACTS PROSPECTIVE STUDIES)

The CEP (Contrats d'études prospectives - contracts Prospective Studies) allows the State and social partners to establish jointly a diagnosis of a private economic sector and possible actions. Their cost is variable according to their purpose and shared between the partners.

The CEP is based on several principles:
- A contract between the social partners and the State
- A state funding of 50% expenditure
- operators are selected jointly by the social partners and the State.
Contracts of prospective studies are mobilized by the State and the social partners, in connection with the joint national committees of employment (CPNE commission paritaire nationale de l’emploi) (CPNE) (see § 4.5).

In 2006, CEP (Contrats d’études prospectives - contracts Prospective Studies) has mainly concerned the following professional areas: mutual janitors, pharmacies, construction, chemical industry, entertainment, customer service centers, supermarkets.

The realization of contracts of prospective studies in the territorial plan is encouraged; the progress of the territorial contract of prospective studies confirmed in 2008.

In 2008, CEP mainly concerned the following professional sectors: the sector of the mutual insurance, the chemical industries, the mass-market retailing, the businesses by the sport, Telecommunications and the smart cards.

THE ACTIONS OF EMPLOYMENT AND SKILL’S DEVELOPMENT (LES ACTIONS DE DÉVELOPPEMENT DE L’EMPLOI ET DES COMPÉTENCES - ADEC)

The ADEC aims to enable employees (and not employees: farmers, craftsmen,…), to adapt, to increase and to validate their skills and to strengthen their employability either, in the company or outside the company or outside the sector which employs them. The prior beneficiaries are the employees weakened by the evolutions of the employment: employees of first levels of qualification, experimented employees arriving the second part of their career (45 years and more), people employed in companies of less than 250 employees.

Beyond the actions developing the skills by the training, the State implement diversified actions by branches and companies: the accompaniment of the internal and external mobilities within the company and business sector, the assistance for company taking over, the support for the transfer of the skills or of the Validation of non-formal and informal learning- Validation des Acquis de l’Expérience - VAE …

The ADEC is concluded at the national or regional level with professional or interprofessional organizations and not with companies. They are multiannual agreements. In the regional level, they can accompany territorial projects concerned by active partners labour pools and networks of companies (poles of competitiveness). Their implementation looks for the cooperation with regions with a measure of autonomy, in particular with regional councils.

The ADEC are coordinated and their impact are assessed on a regular basis. The financial intervention of the State concerns the spending of:

− the engineering (conception and experiment),
− the accompaniment (information and communication),
− the implementation of these actions (including the costs of earnings for the concerned employees in case of difficulties met by companies).

The ADEC was mainly concluded in the regional level, in application of national agreements framing or on the basis of local initiatives.
In 2008, the ADEC concerned diversified sectors such as: branches of industry in crisis (as the textile, leather clothes, the metal industry, the automobile sector, ...), sectors of services in development and in professionalization (cleaning sector and its annex services, help services at home...)

The ADEC benefited for approximately 100 000 salaried or active people. The trend is:

- to intensify targeting small, medium sized companies and very small ones,
- to focus on actions strengthening the employability and make mobility more easy for employees (among which the senior employees).

In 2008, the financed action had for objective to benefit:

- 76 % of recipients of first level of qualification,
- 82 % of recipients belonging to companies of less than 250 employees,
- 32 % of employees aged 45 and more.

The realizations 2008 in the course of consolidation should show a slightly decreasing result of the objective aiming at the experimented employees but to confirm the achievement of two other objectives.

Source : Budget Plan for 2010 – Ministry of Employment

The ADEC has been strongly supported by the state in the professional sectors where there was a high concentration of vulnerable workers. Fifteen national framework agreements were signed in 2009 and at the beginning of 2010 (seven were managed at national level and 8 managed at regional level. The ADEC received a bout 150 000 employees. The financial assistance of the state for ADEC conventions mainly covers expenditure on operations (80%), engineering costs accounting only for 10% and support accompaniment expenditures make up 10% (See 3.1)

Source : Budget Plan for 2011 – Ministry of Employment

**GPEC - GESTION PROVISIONNELLE DES EMPLOIS ET COMPÉTENCES**

Among employers, anticipation is also done through the “GPEC (Gestion prévisionelle des emplois et des competences - strategic workforce planning).”

managing proactive and preventive human resources that includes the skill requirements, depending on environmental constraints and strategic choices company.

Parliament has chosen to encourage businesses to commit themselves in a process of GPEC.

The Law for Social Cohesion of January 18, 2005, created a three-year obligation to negotiate GPEC for companies and groups of 300 or more employees and the community-scale groups (more than one thousand employees in Europe). This obligation to initiate negotiations addressed several issues including the development of tools in order to anticipate changes in job and skills and to support employees.

Companies wishing to develop a plan for management of jobs and skills, may have a mechanism to support the design of this plan. It creates profiles, Trades repositories employment data on changes in jobs and training required. This device is eligible for two grants from the State which may be supplemented by co-financing from the ESF.

The agreement signed between the State and the company determines the amount and the part of the financial participation of the State in relation with the cost of intervention of the consulting firm as well as its duration, which cannot exceed 12 months.
It mentions a number of employees potentially concerned by the plan of GPEC. (Gestion prévisionelle des emplois et des competentes - strategic workforce planning).

It plans a meeting of balance assessment, 6 months after its term, between the profitable companies and the signatory authority.

GPEC agreement may be preceded by a CEP. (Contrats d'études prospectives - contracts Prospective Studies).

**THE OBSERVATORIES**

- Regionally, the **Regional Observatories for job and training** (OREF: Observatoires régionaux emploi-formation) were established by the planning contracts concluded with the regions since 1989. They gather different services in a region: regional council, government departments, the institute's services of National Statistics and Economic Studies, services of chambers of the Ministry of national Education and sometimes social partners. Their role is to collect data on employment and training for prospective analysis occupations and skills in each region.

  These provide support to decision makers (state, region, branches ...) and guidance and counselling bodies, on issues of economic and employment changes. More specifically, the anticipation of employment’s and skills’ needs to guide the actions of the institutional, territorial and professional stakeholders, requires prospective tools based on means of specific expertise.

- The law of May 4, 2004 requires professional sectors to develop Observatories looking trades and skills to national competence regional or territorial legislation to help companies define their training policies and employees to develop a career plan.

  The **observatories of occupations and qualifications** (observatoires des Métiers et des Qualifications) were created by the law of May, the 4th 2004. These observatories are managed by the sector organisations (social partners) to produce diagnosis on employment and training and forecast the future needs in their own sector.

  The ANI (Accord national interprofessionnel - National Interprofessional Agreement) of 5th december, 2003 strengthens the role of the CPNE (Commissions paritaires nationales de l'emploi - National Joint employment Commission), asked to examine periodically the qualitative and quantitative evolution of employments and qualifications in their professional field and to determine priorities in training. Observatories have to help them there.

  Finally the observatory can have a national, regional or territorial competence with possibility of formal delegations in an OPCA at the territorial level.

In addition of partnerships with public structures, some observatories of branches want to collaborate with the OREF(Observatoires régionaux emploi-formation - regional Observatories for job and training). In these case, this partnership can consist in :

- provision of services from the OREF on behalf ot the observatories,
- analysis by the branches of data supplied by the OREF.
The links between the two networks, namely the observatories of economic sectors and the Oref remain to be improved. At a regional level, the joint inter-regional employment commissions (commissions paritaires interprofessionnelles régionales de l'emploi - COPIRE) could play a role in this prospect in so far as it awards a place to social dialog, bearing in mind the implementation of a joint regional policy of training and employment.

8.2 Practices To Match VET Provision With Skill Needs

THE ROLE OF CPC - COMMISSIONS PROFESSIONNELLES CONSULTATIVES

The main ministries that award vocational diplomas or certificates have set up CPCs, in charge of looking into how new certifications can be created or how the existing ones can be revised. These commissions call upon the advice of professionals, while also basing their work on forecasting studies carried out in their respective sectors.

The CPCs (Commissiones Professionnelles Consultatives — The advisory vocational commissions) bring together all of the industrial partners from a given sector to create new certifications or revise existing ones.

The CPCs are composed of four collegiate bodies: employers, employees, public authorities and qualified eminent figures.

The diploma design or the revision process includes the following elements:
- An analysis phase, during which studies are undertaken to determine whether it would be appropriate to create a new diploma or revise existing ones;
- The elaboration of reference guidelines on the trade activities, intended as a 5-year forecast on the main activities involved in jobs that are likely to be performed by the future diploma-holders.

ROLE OF CPNE COMMISSIONS PARITAIRE NATIONALE DE L’EMPLOI

The CPNE (Commissiones paritaires nationales de l'emploi - National Joint employment Commission) is a joint consultative body created by the representatives of employers and unions of employees in professional sectors.

They define the professional qualifications as CQP, or preparations for the degree of technological education and they define their view, to be developed under the contract and periods of professionalization. Thus, the training received under a contract of professionalism can lead to a qualification on a list established by the National Joint Committee on Employment of a professional branch.

The CQP (certificat de qualification professionnelle) are created within CPNE (Commissiones paritaires nationales de l'emploi - National Joint employment Commission). The CQP are qualifications that demonstrate that an individual is sufficiently skilled for a qualification identified by a professional branch. They are associated with a coefficient of remunerations in the collective agreement.

Obtaining a CQP certifies that the holder may exercise a professional activity in a work situation and with a precise degree of responsibility. Issued in their own names by the various professions to meet their specific needs, CQP are valuable only in class or grouping of industries that created them. There are about six hundred and forty in more than eighty professional branches.
IMPACT OF NEW BUSINESS ACTIVITY ON THE TRAINING

Different sectors are evolving and impacting training requirements. There is an evolution of training programmes including in trades and green sector of the economy and social solidarity.

THE GREEN SECTOR

on the green of the economy, the ability of trainers to learn new technics is an important issue to pass environmental standards. The training of trainers is essential.

Several issues should be taken into account:
- The updating of the training standards to ensure the adaptation of training content to sustainable development;
- Adaptation of training content, programs, possible creation of new qualifications, training teachers and trainers, development of initial and continuing training for careers green ...
- Strengthening the link with the labor market should identify sectors and businesses impacted by the "greening" of the economy ...
- The funding of some important projects and innovation.

Example: Programme FEEBAT

FEEBAT programme (Training for energy efficiency in buildings) seeks information and professional training of contractors in the building energy renovation of existing buildings.

The services to individual person

The policy linked to services to individual was intended to people and children until the 90s and then to all people. This policy was underlined by the between 2005 et 2009, due to the national cohesion plan. The law of 26 july 2005 has implemented a first program for developing these services.

The objective of this program was to create 500 000 jobs in a period of 3 years.

For this purpose, the State have developed the offer of services giving financial assistance to businesses prepared to commit itself in a sector dominated by non profit organization. The State want to increase the demand extending to 21 activities the services giving right to diverse aids.

In 2009, the financial public effort in favour of services to individual amounts to about 6,6M deuros. This financial assistance consists in tax and social exemptions and it benefits 3,4 millions of private individuals, 7000 non-profit organisations and 4 700 approved undertaking.

9. GUIDANCE AND COUNSELLING FOR LEARNING, CAREER AND EMPLOYMENT

9.1 Strategy And Provision

The issue of guidance is currently central to the political concerns. In 2008, France chose this theme as the Common Market issue for the French Presidency of the European Union. It leads to a European resolution aiming at well including guidance in training and education strategies.

On the other hand, guidance is also a major cause of concern in current debates around the reform related to guidance and lifelong training. The Law of 24 November 2009 establishes a right to be trained and guided: each person has at his disposal the right to be informed, counselled and accompanied in the field of vocational guidance.

The law of 24 November 2009 establishes a national public service about guidance and more specifically creates a right to be informed on occupations and qualifications thanks to a digital service guidance and the appointment of a DIO (Délégué à l’information et à l’orientation – delegate for information and guidance).

9.1.1 BACKGROUND

Even though the State currently tends to delegate and to outsource and entrust other parties (the semi-public sector, the associations and even the private sector) with some of these actions, it still handles the bulk of information, guidance and counselling activities and plays a large role in their funding.

The stake in the governance of the guidance arises today because State and regional councils have responsibilities shared in these matters. The State keeps a competence of common law in the information, guidance and counselling of the school young people, students, job-seekers (National Body for Employment Pôle Emploi).

However, the law of 2004 arranges that the regions "define the priorities relative to the information, guidance and counselling ". Since then, the Regions have been recognized to be invested with a mission of coordination of the information, guidance and counselling.

Two of the Ministries are particularly involved, namely those in charge, respectively, of education and employment. The services of the Ministry of National Education are targeted mainly towards the school-aged population (students of lower and upper secondary schools as well as university students). Its activities take place inside schools, but also in CIO (Centre d’information et d’orientation – information and guidance centers. The services are offered mainly by specialists - psychologist-guidance counsellors - but are also handled by non-specialists, namely the students' main teachers. In addition, the Ministry is responsible for a major organisation in charge of producing information on studies and professions - the National Office for Information on Instruction and Professions (ONISEP).

The services offered by the Ministry of employment are concerned more with adults actively seeking work, entry into a new field, mobility or training. Its activities are delivered through the national Body for Employment (Pôle Emploi).
Their 1800 agencies cover the whole country and are staffed with employment counsellors. In addition, this Ministry is responsible for an organisation that provides information on continuing training: Centre pour le Développement de l'information sur la formation permanente (Centre INFFO).

9.1.2 A LARGE NUMBER OF ORGANIZATIONS

Alongside the two Ministries, a large number of public and semi-public organisations, private organisations and associations of all kinds have come into being over the last twenty years. The standing reception, information and guidance centres (Permanence d'Accueil d'Information et d'Orientation - PAIO), and the local missions (Missions Locales MLs) for young people between ages 16 and 25 with difficulties entering the mainstream and the job market were set up by the public authorities. Other organisations include the inter-institutional skills audit centres (Centre Interinstitutionnel Bilan de Compétences CIBCs) for employees and job-seekers looking for defining their career or training development plan, funded partially by the State; and the private organisations, like "L'Etudiant", which informs secondary school and university students.

Employer organisations play a minor but growing role in the information and counselling landscape. They participate indirectly in the schemes through the levies they pay to the various unemployment subsidy funds, as well as through funding for continuing training, the apprenticeship tax and the leave time granted to employees who wish to undergo skills review or benefit from training to foster mobility.

Consular organisations also play a role: these include the chambers of commerce and industry, the chambers of trade (craftsmen), the chambers of agriculture, and the private enterprises that build up information and counselling services. Some of the more noteworthy organisations include the Paris Chamber of Commerce and Industry's guidance service, the national information and vocational guidance bureaus (BIOPs) and centres that assist in decision-making on alternating work-study programmes and apprenticeships (CAD).

Employee labour organisations play a very limited role in organising and funding information, guidance and counselling services. They act only as an advisory body on career management and establishment of salary levels for the professionals involved in guidance.

France has at its disposal indicators on the organisation of structures (movement of entries, of exit, rate of placing…) but these indicators are broken down and they focus more on the success of people than on the efficiency of guidance systems. There is not an assessment of practices and of their impact at a macro-economical level.

9.1.3 THE DIO (DÉLÉGUÉ À LINFORMATION ET À L'ORIENTATION – DELEGATE FOR INFORMATION AND GUIDANCE)

On 23 June 2010, the DIO has been appointed by the Prime Minister. According to the law of 24th November 2009, he has been in charge of several missions.

Missions :
– Proposing priorities for national information policy and guidance and counselling;
– Establishing quality standards for the exercise of public service mission of information and guidance;
- Evaluating national and regional policies on information and vocational guidance. He/she supports the implementation and coordination of information policy and guidance at regional and local levels.

On August 31, 2010, the Prime Minister has sent his letter of assignment to the DIO.

France's situation regarding information, guidance and counselling is characterised by a great deal of variety and complexity in the services offered to its users.

The functions of information and guidance are supported by multiple structures and relays at the national and regional levels. More than 8,700 structures exist, performing those functions as main or secondary mission, they belong to more than 20 different networks.

*Source: Budget Plan for 2011 – Ministry of Employment*

The guidance and counselling services vary according to:

- the different types of groups targeted (school-aged students, young people, adults, the unemployed, women, the handicapped),
- the types of services offered (individual counselling, skills reviews, group or individual services, training, information),
- the qualification levels of the practitioners (counsellors, psychologists, teachers, informers, social workers),
- the type of status held by the structure (public, private, non-profit making, commercial, professional),
- the type of funding used (national, local, joint employer-employee organisations, enterprises, users).

**The dematerialized service:**

- This service consists in a dematerialized platform and structures relay labeled. The project specifications for the performance of the public service are set up made by by the delegate to information and guidance.
- To encourage many people to use it, and to provide throughout the country a guarantee of equal quality and readability, a labeling procedure has been implemented.
- The label is called "pole" To get it, then the service should be provided in accordance with a specification of quality requirements such as hospitality or undifferentiated public respect for the confidentiality of personal information of users.
- May be awarded the label:
  - Any organization that delivers free on one geographical site with comprehensive information and objective and personalized
  - The bodies that issue such information and advice in several geographic locations may justify for each of the conditions for awarding the label;
  - A group of organizations, meeting the requirements of information and advice, and bound by a convention, when the geographic locations may justify for each of the conditions for awarding the label.

*Source: Decree of 05/04/11 (OJ of 5.5.11)*

**Art. R6111-1 of the Labour Code**

According to the administration, the determination of the geographical site is done in consultation with the local authorities concerned and meets a requirement of proximity and accessibility to the public.

*Source: Circulaire interministérielle n° ETSD1110449C du 26.5.11*
The project specification refers to the "charter Marianne" of the home in public services, focused on the user- (access, attention, speed, responsiveness).

The organization takes into account the individual in all its dimensions:

- It respects the principle of non-discrimination and diversity of users
- It is free, impartial and respects the freedom of choice:
- It ensures neutrality in the processing of applications likely to be better directed to other ones more specialized in this field
- It ensures confidentiality:

A decree defines the logo associated with the national label "Guidance for all - Pole of information and guidance on training and jobs."

Source: Decree of 25 July 2011

9.2. Target Groups And Modes Of Delivery

Main principles are

- Information and guidance centres (CIOs - Centre d'Information et d'Orientation - information and guidance centre) mainly address students in lower and upper secondary schools, as well as university students, but are also open to adults
- The National Body for Employment (Pôle Emploi) is open to adults, regardless of whether they are job-seekers or employed;
- Public employment services, with Pôle Emploi as its centrepiece, are by far the main provider of information services for adults. Pôle Emploi has modernised over the last five years in order to standardise its range of services, move closer to fulfilling its "customers" requirements, and approach enterprises to present customer profiles (in particular to assist job-seekers with no qualifications).
- The local missions (Missions Locales MLs) and the (Permanence d'Accueil, d'Information et d'Orientations PAIOs) are qualified to assist young people from 16 to 25, who have left the school system without qualifications or with obsolete qualifications.

For the purposes of the French employment market, "adults" are defined as those who are above age 26 and who have exited the initial training system.

Other organizations with specific aims

Larger continuing training organisations might provide guidance, counselling and work placements all in one. For instance, the National Conservatory for Arts and Trades (Conservatoire Nationale des Arts et Métiers CNAM), which operates as a public educational service and, most of all, the National Association for Adult Vocational Training (Agence pour la Formation Professionnelle des Adultes AFPA), are both considered part of public labour services, and work psychologists can offer people applying for vocational training sessions a situational review at one of the organisations before guiding them towards a given direction.

The situation of AFPA has evolved because the Law of 24th November 2009 foresaw the transfer of its staff to Pôle Emploi. Since 1st April 2010, 913 employees of AFPA, serving the orientation of job seekers are integrated into National Agency for Employment (Pole Emploi).
The job seekers will receive support at two levels: an initial agency orientation, followed by a provision of vocational guidance conducted by staff from the AFPA in National Agency for Employment (Pole Emploi).

The employer-employee structures that manage insurance funds for training, in particular the Individual Training Leave Management Fund (Fonds pour la gestion du congé individuel de formation FONGECIF), provide guidance services, inform their members of their rights and advise them on the steps to take.

France's system stands out in that it has developed a special service offers for managers, run by the Association for Managerial Employment (Agence Pour l'Emploi des Cadres APEC), a joint employer-employee association, that has 45 centres throughout the country: the association offers counselling, personal reviews, assistance in re-entering the job market, information, a journal, and online services, to name but a few.

To know more about it, please refer to: National interprofessional agreement of 12 July 2011 on the association executive employment

Some associations, like Retravailler (re-entering the job market), originally founded to help female job-seekers offer help through guidance and market-entry techniques.

A more marginal initiative is that of the Information and Orientation (CIOs - Centres d'Information et d'Orientiation - information and guidance centre) and CIDJs (Centre d'Information de Documentation de la Jeunesse - Centres for Young People), which are also open to adults looking for information or counselling.

Experiments of limited geographical scope, bringing together services from several institutions on a "walk-in" basis are currently developing: these include special "houses" offering information on continuing training and employment (MIFE) and Paris' Trade Metropolis (Cité des métiers), an information and counselling area run by professionals in guidance for students and workers, training, employment and entrepreneurship (AFPA, ANPE, CIBC, CIO, etc.). Paris' Cité des métiers is based on the network concept which, though difficult to implement within the French environment, especially taking into account how many different players are involved, seems to be better suited to reality than a "single-counter" system.

The law on social cohesion of January 18th 2005, created the "Maison de l'Emploi" (employment's houses are similar to the job centres in Great Britain). These centers are located in a local area (region or department) and as well as the Cité des métiers, bring together services from several institutions on a "one stop shop" basis. In the same place, young people and adults, employees and unemployed people can find guidance and counselling with National Agency for Employment (Pole emploi), Missions locales, OPCA, local authorities representatives, and so on.

**Tools and methods**:

Commonly-used methods:
- Tests, questionnaires;
- Trade forums;
- Guidance groups;
- Individual interviews;
− Resource centers: centre d’information et d’orientation (CIO – information and guidance centre), documentation and information centres (CDI) (in schools), information and documentation centers for young people and youth information stands (Point Information Jeunesse- PIJ), (Service Universitaire Information et d'Orientation – SCUIO);
− Training sessions in the workplace;
− Assistance from local figures (on a case-by-case basis). Some local authorities can create specific services to help people with difficulties, especially for social inclusion.

Finally, State, regional authorities and social partners wished to create a national portal on guidance to help everyone to find information on IVET and CVET. The main guidance organisations were involved in this project

This portal will be implemented in October 2011. Since 2006, the national portal is http://www.orientation-formation.fr. The new one will be called “orientation pour tous”.

The implementation of a global approach on the quality of guidance services is complicated by the multiplicity of structures and decision makers. For ten years or so, some local authorities have carried out actions for a better coordination of the services: leading of the local players, sharing together practices, developing of a common culture. At a national level, the Law of 24 November 2009 establishes a national certification of training organisms subject to be involved in mission of public service related to information and vocational guidance. The criteria and processes of certification have been defined.

9.3 Guidance And Counselling Personnel

Out of the 30 000 positions held by people responsible for guidance and counselling in France, 5 000 are statutorily psychologists.

The other counselling professionals have varying professional backgrounds.

In addition to the work carried out by personnel specialising in guidance counselling, occasional services are provided by people whose main job is not in this area. These can be professors, socio-cultural personnel, specialised instructors, etc. Most of them have not received specific training in counselling. Lastly, volunteer workers from associations can also offer their services.

In France, three main types of training leading to guidance counselling professions can be distinguished:

− Higher full-time university instruction that is specific to a single profession: training for psychologist-guidance counsellors who wish to work in public guidance services;
− Higher alternating instruction specific to a single profession: this is the type of training offered to counsellors who wish to work at the National Body for Employment (Pôle Emploi);
− University training that leads to employment opportunities in the field of guidance for workers and human resources, as in the Master Professionnel : Psychology and vocational guidance practices, offered by Institut National d'Etudes sur le travail et l'orientation professionnelle I-NETOP). Research is also part of the coursework for the Master Recherche : psychology of work and transitions, offered at Conservatoire National des Arts et Métiers CNAM/INETOP, and integrated into the Multi-Partner Doctoral School "Enterprises, Labour and Employment" (CNAM/Université de Marne-la-Vallée). This Master can lead to a Doctorate in Psychology.
Alongside these three forms of instruction, there exist continuing training actions and tutorial-based training programmes, or training offered by public organisations like AFPA, an association that operates under the Ministry of Labour or the Centre Académique de Formation Continue CAFOCs (the Ministry for National Education's Academic Centre for Continuing Training) or private organisations.

**QUALITY ASSURANCE**

The issue of quality is based on the implementation of a national labelisation of guidance and counseling providers. Indeed, in order to participate in the mission of general interest information and vocational guidance for youth and adult, criteria and qualification purposes remain yet to be defined.

However, steps of progress leading to the signing of quality charters are also implemented by some training funding bodies.

**National quality for CIBC**

The network of CIBC was identified by the State, by circular, as "a reference network for all funders, prescribers, users and providers of skills assessment." The circular states that "CIBC thus provide a public service in terms of quality development in the supply of skills assessment." In this context social partners expressed the desire that CIBC engaged in a national quality initiative to harmonize their practices, their organization, functioning. These benchmarks have been translated into a national repository. The design of the repository required two years of work, it was participatory and was subject of specific funding from the Ministry of Labour. This approach, for all CIBC, is addressed to other agencies that want to become CIBC with the agreement of the national federation and register in a dynamic network.

**A quality initiative supported by the development of a guide for professional guidance**

The “Pôle Rhône-Alpes de l’orientation” (PRAO – regional organisation giving information and guidance), encourages professional counsellers to improve the quality of their organization and the services rendered and makes available a calendar reminder of key principles to guide their actions. This document is from the Guide to indicators that the agency has developed within a European project with its partners, entitled "Improving the quality of training" (AQOR, 2007-2010) ", its purpose was to improve the quality of systems, services and professional practices in the field of guidance.

10.1 Funding For Initial Vocational Education And Training

This type of training is funded by the State, and in particular the Ministry for national education, higher education and research, as well as by the local administrative units, as part of the decentralisation process.

The State remains responsible for:
- determining the various training tracks, establishing national programmes, and the organisation and content of what is taught;
- establishing and granting national diplomas and granting university-level degrees and titles;
- recruiting and managing teaching staff;
- allocating resources earmarked for education depending on the numbers of pupils;
- monitoring and evaluating educational policies with a view to ensuring that the educational system is consistent.
### Table: The financing of education activities and the purchasing of goods and services linked to education in 2008 - total expenditures (current expenditures plus capital) of financial contributors (provisional assessment) metropolitan France + DOM (Département d’Outre-Mer – Oversea department) (in millions of euros)

**Source:** Repères et références statistiques - édition 2010 Budget, coûts et financement

The State is responsible for the remuneration of teachers and other educational and guidance staff. However, it is the local authorities that are now responsible for investment and operations.

*The Regions*, with regard to higher secondary education establishments in particular (high schools and regional special education schools or Etablissements Régionaux d’Enseignement Adapté EREAs, for example), are responsible for:

- use of the facilities by trainees, food services, housing, and general and technical maintenance, with the exception of the guidance and supervision of students for establishments under regional responsibility;
- recruiting and managing technicians, and service staff;
- building, renovating, expanding, performing major repairs, equipment, and operations for establishments under regional responsibility.

The regions contribute to functioning costs in secondary schools, agricultural secondary schools and special education institutions. They can also give investment grants to help private technical instruction (technological and vocational secondary schools).

**APPRENTICESHIP**

The apprenticeship track is considered as a form of initial vocational training and apprenticeship is considered as a form of employment. Funding for apprenticeship is covered by the apprenticeship tax (0.5 % of the gross annual bill paid by the enterprises), the State (through exemptions from labour charges), as well as by the Regions (through grants for hiring the apprentices, and for operational expenses of the CFA - Centre de formation d'apprentis - apprentice's training center).
In 2009, excluding expenses for the training of its own agents, the main item of expenditure of the state is learning: euros 1.7 billion (23% of its expenditure on continuing vocational training and apprenticeship) In spite of a transfer of delegation from the state to the regions since 2004, government expenditure for learning continued to grow in 2008 (+7%) although less than in 2007 (+17%) .

The first reason for the decline in spending for the young is learning. Priority area of intervention of regional councils, with 39% of their expenditure, spending on learning decreased 3% in 2008. The 2% increase in grants for apprenticeship center training centers can not compensate the decline of 13% of the compensation package paid to employers of apprentices.

Source: Budget Plan for 2011-Ministry of Employment

ALTERNATING WORK-STUDY PROGRAMMES- PROFESSIONALIZATION CONTRACTS

Alternating training programmes, so-called "alternating" work contract, (professionalization contracts) are financed by the companies, the regions, and the State (exemption from mandatory payroll taxes). These contracts, based on alternating periods of work and study, are considered as a form of continuing vocational training (please see 10.3).

10.2 Funding For Continuing Vocational Education And Training, And Adult Learning

10.2.1 Funding for publicly provided CVET

PUBLIC SUPPORT FOR EMPLOYEE TRAINING

State-funded grants

In 2008, the total State’s spending for its policy of vocational training amounted to 4.8 billion euros (16% of the expenditures). It accounts to 8% more than in 2007. It was strongly impacted (- 5% en 2007), by the gradual transfer of funds to regional authorities of subsidized training implemented by the Association de Formation pour Adultes - the National Adult Vocational Training Association– Afpa.

Source: Budget Plan for 2011–Ministry of Employment

The State has set up a grant system to support the objectives related to its employment policy. Such actions are designed, in particular, to develop consulting to trade branches on the developments in particular trades and qualifications and to promote training in enterprises with fewer than 250 employees (Engagement de Développement de l’Emploi et des Compétences, EDEC - Commitment to expand employment and skills, and furthermore, council and training). In that case, it defines specific criteria or priority actions to that purpose.

Region-funded grants

Since 1983, the decentralisation process has been shifting general powers over CVET to the Regions. As a result, alongside the public grants given for training within enterprises, which can be funded jointly by the State and the region (EDEC), the Regions have sovereign powers over special grants offered to enterprises (e.g., specific measures to fight illiteracy, grants for job-seekers in training programmes through language vouchers, partial coverage of training costs, scholarships, loans at zero interest rates, etc.).
Since 2002, the various stages of decentralization have resulted in the transfer of state funding to the regional councils and in particular for:
- subsidies to employers of apprentices.
- Health and social training programmes.
- Training activities and actions related to training undertaken by the National Association for Vocational Training (AFPA)
- Management of the arts and cultural training

In 2008, Regions represent the third financier with 15% of the total expenditure and 4.3 billion euros, almost the same than the state.

**TRAINING OF PUBLIC-SECTOR EMPLOYEES**

The state is responsible for the training of public-sector employees. The state must adopt a coordinated vocational training and career development programme similar to policies adopted by private-sector companies that takes into account the specific nature of public service.

Like companies from the private sector, public administration offices are required to set aside resources to fund training for their employees.

In order to finance the training intended to the state civil service, the State must spend each year to finance the training:
- a contribution equal to 3.8% of payroll for the training plan
- a contribution of 0.20% of payroll to training leaves (CIF – Congé Individuel Formation, individual training leave, CVAE - Congé Validation des Acquis de l’Expérience, leave for Validation of non-formal and informal learning and CBC Congé Bilan de Compétences, leave for skills audit).

For the training of their staff, local governments must contribute a minimum of 1% of payroll. This fee is paid to the National Center for Public Service (CNFPT – centre national de la fonction publique territoriale).

Hospitals must pay at least 2.1% of their payroll for the training plan. Since the law of social modernization of January 2002, they must pay an additional 0.20% of payroll to the Management Committee of vocational training leave. Furthermore, an additional contribution of public health was established. It funds studies for professional advancement of their staff. The rate of contribution was set at 0.20% of payroll in 2007, 0.40% in 2008 and 0.60% in 2009.

**Training expenditure by government (in millions of euros) for public-sector employee’s IVET and CVET, in 2007 and 2008**

In 2008, expenditure for both IVET and CVET, in the public service of the state were less high (inférieures) accounting for 4 billion euros, ie 6.7% of the payroll: 3.2% for initial training and 3.5% for continuing training.

Outside Education, training expenditures decrease of 4.5% and represent 7.8% of the payroll.

Source: DGAFP, bureau des statistiques, des études et de l'évaluation, statistics office, research and evaluation.

10.2.2 Funding for CVET in enterprises

Corporate funding for training is covered by:

- the mandatory financial contribution required from enterprises;
- partial or full collection of this contribution by OPCA;
- the State and the Regions, through the public grants they offer;
- the employees themselves, as they can be asked to contribute to funding their own training.

Rates of the mandatory legal contributions

Where private-sector enterprises are concerned, the amount of the contribution and the calculation methods used vary depending on the type of enterprise involved and its staffing levels. The law requires that companies:

- with less than 10 employees have to pay 0.55 % of the gross annual wage bill (MSAB);
- with 10 to 19 employees 1.05%,
- and with a minimum of 20 employees, 1.60%.

It should be noticed that certain business sectors have set mandatory contribution levels at a rate higher than the legal minimum, through a joint agreement. The enterprise may decide to fulfil its obligation by paying all or part of its mandatory contribution to a special body: an approved joint collecting organisation (organisme paritaire collecteur agréé - OPCA), which has authority at the trade or professional segment level. There also exist OPCAs with interprofessional powers.

Division of the mandatory legal contributions

The financial participation of companies with more than ten employees is divided as follows:

- one payment toward financing the training plan;
- one payment intended to cover alternating work-study (professionalization) and the individual training right (droit individuel de formation DIF; see § 6. 1.2);
- one payment intended to fund individual training leaves (Congé individual de formation - individual training leave).

In regards to the financial participation of companies with fewer than ten employees, it is divided into only 2 parts:
- one payment to fund the training plan (0.40%);
- one payment intended (0.15%) to cover alternating work-study (professionalization) and the individual training right (droit individuel de formation DIF; see § 6.1.2)

The employers of less than 10 employees have to pay at least 0.55% of their gross annual payroll in the same approved equal collection body.

These companies are not subjected to the contribution intended for the financing of the individual training leave, leave for the Validation of non-formal and informal learning and leave of skills audit. This contribution concerns only the companies of 20 employees and more.

**Use of the mandatory legal contributions**

All companies have an obligation to participate in the annual funding of continuing vocational training of employees. Firms participation in CVET is a requirement of a fiscal nature.

In most of the cases, entreprise use their budget to finance the training for the employees (training, skills audit, the Validation of non-formal and informal learning). But they don’t use this budget give the money to the State which can use it as he wants.

Indeed, if the expenditure incurred by the employer is insufficient in comparison with the amount of participation due, or if they don’t pay this contribution to a OPCA, firms must it make a payment and deferred to the “Trésor public” (State funds) equal to the shortfall.

**Some data of the funding of training by firms**

In 2008, companies are the main funder of continuing professional training for employees, even if the rate of increased spending declined slightly: 5% compared to 7% in 2007, it is the same rate as the total spending. Their contribution to the training accounts for 12.6 billion euros in 2008, ie 42% of the total expenditure. This rate is constant over the last three years.

The rate of contributions which are paid by the firms is a minimum. As said before, the legal obligation for companies with 20 employees and more, is 1.6% of their gross annual payroll (MSAB), but the average attendance rate is above 3% of the MSAB.

The actual financial contribution to vocational training for enterprises with 10 or more employees amounted to a average of 2.93% of the MSAB in 2009. It is relatively stable since 2003, in spite of an unfavorable economic situation in 2009. This stability does not exclude an increase in the rate of access to training to 45.9% (provisional data), while the average seems to be stabilizing around 30 hours per employee trained.

By corollary, the cost per trained employee declined, especially in their external component.

Despite a significant decline in the financial effort, the weight of large companies (more than 2000 employees) in the overall volume of deductible expenses is still growing due to their larger share in the total wage bill. They realize and 39.3% of deductible expenses against 1.7% for the companies with 19 employees or less.

*Source: Budget Plan for 2011 – Ministry of Employment*
10.3 Funding For Training For Unemployed People And Other Groups Excluded From The Labour Market

In 2009, in a context of strong increase in the number of job seekers, about 580,000 entries in training of job seekers were registered, ie 5% less than in 2008.

The regions have funded educational costs 62% of courses started in 2009. 51% of these actions were intended to youth people in integration. The national Employment Agency has funded 15% of trainings and the state 12%. The other funds were provided by the students themselves (6%), and by local authorities (other than the regions) or institutions subsidized for the training (5%).

Nine trainees out of ten were paid during their training., training started in 2009 lasted an average of 4.8 months, all together funders. Trainings funded by the National employment Agency aiming to match better with current businesses needs are much shorter (2.9 months on average). Those funded by the state or region are longer (respectively 5.7 months and 4.9 months).

In late 2009, 8% of job seekers in mainland France were in vocational training, 1.7 points less than a year earlier. Unemployed youth were four times more often in training than those aged 45 or over.

Source: DARES Analysis July 2011 • No. 057 - TRAINING OF UNEMPLOYED IN 2009: down 5% input

FINANCIAL MECHANISMS FOR JOB-SEEKERS
A flat remuneration is paid to job-seekers who are not eligible for the conventional unemployment insurance scheme, when they participate in State- or regionally-funded training programmes or are eligible for measures funded by the FNE (Fonds national pour l’emploi – national fund for employment). The FNE finances a set of supporting measures established by the Ministry of Labour (and of employment) to facilitate the employment (or the return to employment). It participates in the financing of the vocational training but also the short time working, the early retirement, or still the reduction in working hours.

**Fonds paritaire de sécurisation des parcours professionnels (Joint Fund for professional career security) - FPSPP**

Based on the observation caused by the partitioning approach "status", the FPSPP (Fonds paritaire de sécurisation des parcours professionnels - Joint Fund for professional career security). The fund may receive some percentage of resources the compulsory participation of employers in vocational training, further provided by the State and the possibility of matching contribution by the Regions. The Fund resources can help to finance vocational training contributing to the qualification and requalification of employees and job seekers (through, inter alia, shares of readiness for employment open to job seekers to access a job identified the benefit of audiences whose characteristics are determined by the framework agreement with the state and the Fund.

**Professionalization contract**

The social partners have also created an alternating work-contract which is funded by the companies’ contribution, as well as the State (through exemptions from labour charges, plus financial aids). In parallel of the apprenticeship contract which depends on IVET, the professionalization contract is available to job seekers aged 26 and over and young people trying to enter the job market. The goal of this type of contract is for the employee to obtain a recognised (by the concerned professional branch) qualification or diploma. The contract is for a six to twelve-month period, which may be extended to 24 months in the event of a professional branch agreement for persons who have left the educational system with no recognised qualification or if the nature of the qualification requires a longer training period. The length of the training component is set at 15% of the term of the contract with a ceiling of 150 hours. These minimum levels may be increased through branch agreements.

Apprenticeship and professionalization contracts have been growing digital in 2008 (+5%), despite unfavorable market conditions. Structural data (population, type of business, education levels on entry, types of degrees offered) in both cases have changed a little. There is a tendency to decrease the duration of apprenticeships, a slight increase in levels of diploma prepared. The duration of contracts of professionalization is also in decline, the sectors of activity change little, with however a slight increase in the industry. Despite steady growth since 2005, the device difficult to recruit those most in need and the proportion of job seekers aged 45 and over remain relatively low.

*Source: Budget Plan for 2010 – Ministry of Employment*
PROGRAMMES TARGETING SPECIFIC GROUPS

These actions are intended to foster access to training and qualification for certain groups, namely the handicapped, the illiterate, inmates and refugees.

Such actions are funded by the State, the Regions and the ESF as well as public institutions, private and public educational institutions, volunteer organisations, professional organisations, labour unions, family organisations, and companies.

TRAINING FOR THE DISABLED PEOPLE

In 2006, 29 346 disabled people took part in a training financed by the State – FNE- (11 037 people), the regions – specifies subsidies- (8 579 people), AFPA –subsidies from State- and AGEFIPH (association de gestion du fonds pour l’insertion professionnelle des personnes handicapées) - a public organisation for the employment of the disabled people which gives subsidies to disabled people (to cover transport, housing’s fundings during the trainings) or firms (ie: to fit out the workstation) - (9 730 people).

The law No. 2005-102, dated 5th February 2005 on the equality of rights and chances, on the participation and the citizenship of the disabled people provides an article L.5211-2 of the Labor Code requires the State and its partners (Agefiph, FIPHFP, regional councils, welfare agencies, labor organizations and associations representing people with disabilities) to define and implement regional collaborative policies for training of disabled people in order to promote greater coherence between training systems and to be more responsive to the needs of individuals and businesses.

In 2009, more than 95 800 training activities were financed by the State, the regions, AGEFIPH (Association pour la gestion de l’emploi, de la formation et de l’insertion des personnes handicapées - Association for the Professional Integration of disabled Persons)- a public organisation for the employment of the disabled people which gives subsidies to disabled people (to cover transport, housing’s fundings during the trainings) and the FSE. It represents + 79% par rapport à 2005.

Source : Budget Plan for 2011 –Ministry of Employment

The training of disabled people is funded by:

− the state, which took over in 2009, 25 200 training activities for disabled people (+4.2% par rapport à 2005) against 11 037 in 2007.
− regional councils for 10 700 people in 2009 against 8114 in 2007. Regional Councils have funded in 2008, 2330 training under the Vocational Reeducation Centre said regionalized in 2007.

By AGEFIPH, under the agreement AFPA - AGEFIPH for 1712 trainees in 2008 compared to 1605 in 2007 (AFPA). Moreover, the number of contracts awarded by AGEFIPH amounts to 2022 for learning and 1705 for training contracts. (Source AGEFIPH).

Source : Budget Plan for 2010 –Ministry of Employment
The state government has financed 11,264 training programmes in the framework of the Centre de Rééducation Professionnelle - Vocational Reeducation Centre. The National Adult Vocational Training Association (Association de Formation pour Adultes - Afpa) has trained 9,103 disabled people in the framework of its program of subsidized activity - PAS - Programme d’activité subventionnée. Moreover, 3,850 training programs have also been funded by the State government, without taking into account Vocational Reeducation Centre and AFPA. The Regional Councils (except the so-called regionalised Vocational Reeducation Centre) have financed 8,579 trainees in 2008 as well as 2,330 trainings in the framework of regionalised Vocational Reeducation Centre. As agreed by the AFPA convention, AGEFIIPH (Association pour la gestion de l’emploi, de la formation et de l’insertion des personnes handicapées - Association for the Professional Integration of disabled Persons) has taken in charge 1,712 trainees in 2008 comparing to 1,605 in 2007 (source AFPA).

TRAINING FOR PRISON INMATES

Literacy programmes are the main form of training offered to prison inmates. The “prison” component of the Mainstreaming, Return to Employment, and Literacy Programme (Programme insertion, réinsertion et lutte contre l’illettrisme - IRILL) provides financing for training for prison inmates and, more generally, anyone in the court system. The funding comes from both Education and Justice ministries. The goal is to provide special consideration to the needs of the prisoners. Some 25% of all prison inmates are illiterate and more than 50% have completed only primary-level education.

In 2006, 10,300 prison inmates benefitted from training.

As such, the regional department for labor, employment and vocational training ((DRTEFP)) implement with interregional directions of Prison Services (DISP) and the regional employment center an action plan to promote access of detainees to training (refresher / knowledge base, pre-qualifying and qualifying training, distance learning, individualized training, preparation for release ...) to facilitate the return to the employment of these public.

Source : Budget Plan for 2010 – Ministry of Employment

From 1st January 2012, through an agreement and on an experimental basis, the State may entrust the regions with the organization and financing of vocational training for people detained on their territory. This agreement is signed at the request of the regions and for up to four years. And provided for in article 68 of Law No. 2011-525 of May 17 published in the Official Gazette of May 18.

TRAINING FOR MIGRANTS

In 2009, 97,736 CAI were signed (over 500,000 CAI were signed since 2003). In 2010, 23.7% of people in CAI have been prescribed language training in the framework of a CAI. The average number of hours prescribed in 2010 was about 280 hours. Language training is to enable the public, having been a requirement to achieve the level of oral and written language required for graduation original French (DILF) In 2010, the number of applicants for the DILF accounted for 17,370 (with a success rate of 91.4).

Over 61% of the signatories of CAI are concerned by a skills audit.

Source : http://www.ofii.fr
RETRAINING PROGRAMMES FOR EMPLOYEES MADE REDUNDANT

The law dated 18 January 2005, known as the “social cohesion” law, established a new system designed to provide employees with support in the event that they are made redundant.

For companies with fewer than 1000 employees, the employer must offer each employee to be made redundant, personalised retraining services once the employment contract has been terminated. These include mental health services, career orientation and guidance, an assessment of the employee’s skills, and training designed to facilitate the return to employment. The employee is considered a vocational training participant for the duration of the personalised retraining.

10.4 General Funding Arrangements And Mechanisms

SECTORAL TRAINING FUNDS: THE OPCAS ORGANISMES PARITAIRES COLLECTEURS AGRÉES (APPROVED JOINT COLLECTING BODIES)

OPCAs collect, mutualise and affect the contributions paid by companies under their obligation to finance vocational training (see § 10.2.2).

In 1996, four kinds of approvement are distributed between two categories of approved joint collecting bodies: Opca and “Opca approved only to collect the contribution for the individual training leave (CIF - Congé individual de formation - individual training leave), the Opacif.

Contributions collected by the OPCAs can finance:
- Support for training costs asked by the firms;
- Fees and research training;
- Information costs, education and counseling;
- Management costs.

When the OPCAs received the contributions of the firms, they are considered as their property. Money collected by OPCAs are shared: the right to ask for funds is not based on the amount of money paid. The company who paid its contribution to an OPCAs, can obtain funding more or less equal to the funds disbursed.

The number of Opca not authoritatively reduced by law, but new tasks are assigned to collectors, and amenities are actually reviewed (no later than January 1, 2012).

THE FONDS PARITAIRES DE SÉCURISATION DES PARCOURS PROFESSIONNELS (JOINT FUND FOR PROFESSIONAL CAREER SECURITY) – FPSPP

The FPSPP replaces the FUP Fonds unique de péréquation - Unique fund of equalization fund.

Within the framework of the orientations defined by the CPNFP (Comité paritaire national pour la formation professionnelle - National Joint Committee for Vocational training) (see § 4.5), the FPSPP:
- ensures financial equalization between OPCA and OPACIF,
- finance operations for the qualification and requalification of employees and job seekers. These actions are supported by the OPCA and OPACIF and co-financed by FPSPP. These actions are likely to be cofinanced with one or several partners, including for example the State, employment center, regions, and any other partners including the European Social Fund.

For this last purpose, the FPSPP:

- Concluded, in the conditions defined by the CPNFP with the State and Regions, or quite other partner in particular Pole employment, agreements having in particular for object to determine the modalities of participation or cofinancing of the actions contributing to the qualification and to the requalification of the employees and the job-seekers,
- Defines the technical modalities, in accordance with the orientations of the CPNFP, for implementation of the mechanisms of cofinancing of the actions contributing to the qualification and to the requalification of the employees and for the job-seekers,
- Defines the procedures to be followed by the employees to benefit from the coverage in accordance with the CIF (Congé individual de formation - individual training leave) and from actions of qualification and from requalification of the employees and from the applicants of employment stakes in work within the framework of the present agreement.

The objective set by the social partners in the Accord National Interprofessionnel of January 7th, 2009 is to double the number of employees accessing the course of a year of training, or 500,000 additional employees and increased a thirds of job seekers in receipt of training in any one year, or 200,000 people.

To realize these missions, the FPSPP receives and manages:

- a share of the legal obligations of companies. These sums collected in accordance with the contributions of the OPCA will finance the qualification and the requalification of the employees and the job-seekers,
- The surpluses of the sums paid by companies in accordance with the professionalization and the personal leave for training, noticed by the OPCA and the competent OPACIF, according to the regulations in force,
- Other resources planned by its statutes.

**TAX INCENTIVES**

Business participation in CVET is a tax liability for employers. Indeed, if the expenditure incurred by the employer is not sufficient in terms of the amount of contributions due, it must make a payment to the Treasury equal to the difference found.

**LEARNING ACCOUNTS AND VOUCHERS**

All regional councils are responsible of the implementation of vocational training especially for unemployed people. Some of them created specific vouchers for foreign languages training, courses in computing, etc. The conditions of access and the amounts vary.
SAVING SCHEMES AND LOANS

There are no specific saving schemes and loans for training.

Nevertheless, people can ask a consumer loan to finance their own training.
